milo × axplora

MILO FOR AXPLORA · OCTOBER 2026

Utilisation, gap and revenue for every line. One version, not five.

Materials sit in SAP, the forecasts in Power BI, the line plans in Excel and the projects in Microsoft Project. Milo joins them up across Chasse-sur-Rhône, Le Mans, Leverkusen, Mourenx and Pompey, and answers in plain English. **Then it tells you what to do next.**

Live in about a week · £2,500 to try it for a month · Hosted in Frankfurt, ISO 27001 and SOC 2

> Utilisation by site this quarter against the 80% plan. Where is the gap, and what is it worth?

The 40 lines ran at **73% against an 80% plan.** The gap is worth **€6.4m of revenue this quarter**, and two thirds of it sits in Mourenx and Chasse-sur-Rhône.

QUARTER TO DATE · BY SITE · AGAINST PLAN

SITE	LINES	UTILISATION	AGAINST PLAN	REVENUE GAP	MAIN CAUSE
Mourenx	9	63%	−17 pts	€2.2m	Raw material late on two contracts
Chasse-sur-Rhône	9	68%	−12 pts	€2.0m	Batches waiting on QC release
Leverkusen	7	74%	−6 pts	€1.4m	Changeovers between campaigns
Pompey	7	77%	−3 pts	€0.8m	Two short runs
Le Mans	8	86%	+6 pts	None	Over plan
Network	**40**	**73%**	**−7 pts**	**€6.4m**	

Mourenx lost **11 line-days** waiting for material. That is a supply problem, not a capacity one.

I can make this the **S&OP pack**, refreshed from SAP every morning, and give each site lead their own page before the monthly review.

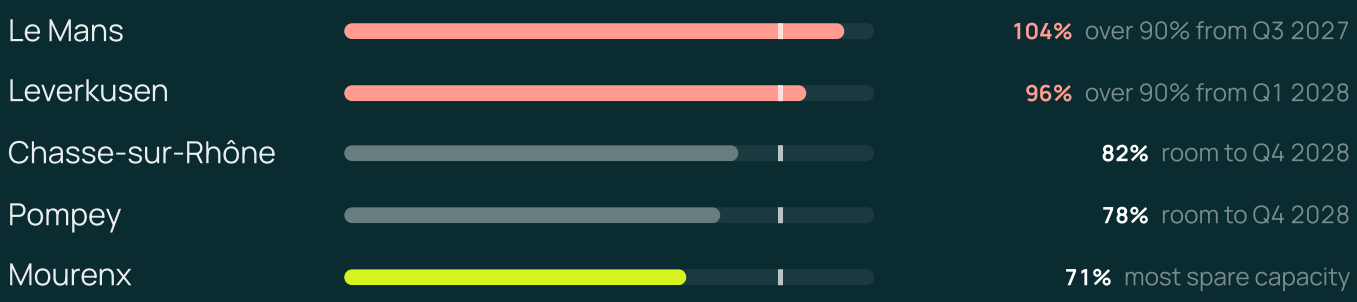

Build the S&OP pack

Split by customer

> On signed and likely contracts, when does each site run out of capacity?

Le Mans passes 90% in Q3 2027 on signed contracts alone. Add the likely work and **Leverkusen follows in Q1 2028.** The other three have room for two years.

PEAK LOAD OVER THE NEXT EIGHT QUARTERS · SIGNED PLUS LIKELY CONTRACTS · WHITE LINE MARKS 90%

If a new suite takes two years to bring online, **the Le Mans decision is due this quarter.**

I can rerun this **every time a contract changes stage**, and alert you the day any site's forecast crosses 90%. Set the 90% alert | Show by customer

> What changed on the site schedules this week, and do the Excel plans still match SAP?

212 schedule changes across five sites this week. **17 batches** in the Excel plans no longer match SAP, and **4 put a customer delivery at risk.**

THIS WEEK · EXCEL PLAN AGAINST SAP PROCESS ORDERS · AT-RISK FIRST

SITE	BATCH	EXCEL PLAN SAYS	SAP SAYS	DELIVERY
Leverkusen	Campaign L-14	Starts 21 Oct	Order released 4 Nov	9 days late
Chasse-sur-Rhône	C-117	Two batches	Three batches	6 days late
Le Mans	LM-062	QC release 18 Oct	Not yet sampled	4 days late
Mourenx	M-208	Line 3	Line 5	On time
Pompey	P-033	Complete	In progress	On time

17 mismatches **4 at risk**

Nobody cleans the data first. Milo finds each mismatch, **names the planner who owns it** and logs the fix, so the same error stops coming back.

I can send each site planner **their mismatches on Teams at 8am**, and only mark the plan as final once SAP agrees. Send to planners | Show the log

ILLUSTRATIVE FIGURES Every number, batch and contract above is sample data shaped like a five-site CDMO network, not Axplora's. During the proof of concept the same questions run on your data.

01 · SYSTEMS AND MASTER DATA

SAP, Excel and Project in one place. Power BI goes.

Milo connects to each system directly and keeps the data flowing, so nobody exports, converts or pastes into a deck. It builds its own dashboards, so the commercial and financial forecasts move across with everything else.

SAP materials

Materials, process orders, sales orders and customers.

SAP finance

Revenue and cost by site, line and contract.

Excel line plans

Lines, workstreams, available hours and planned output, per site.

Microsoft Project

Read directly. No converting files before anything can read them.

Teams

Ask Milo in a chat. Alerts land where people already work.

SharePoint and files

Old decks and spreadsheets, uploaded and used in answers.

Copilot STAYS

Still writes the documents and emails. Milo does the numbers.

~~Power BI~~

Replaced by Milo's own live dashboards.

TO START

The minimum dataset

- SAP materials and process orders
- Sales orders and customer contracts
- The Excel line plan from each site

USEFUL IN MONTH ONE

Turns gaps into euros

- Contract value or price per batch
- QC release dates
- Microsoft Project plans

LATER

Proposal to execution

- Pipeline and proposals, for likely demand
- One portfolio of projects across sites
- The sites in India

Master data: we don't wait for it to be clean.

In week one our engineer maps each site's codes for lines, materials and customers to one model. Where SAP and a site plan disagree, Milo flags it to the person who owns it, and the rule that fixes it is written once and reused. Data quality improves because the mismatches are visible every day, not found at quarter end.

The organisation it needs.

Business owner	One person who decides what the S&OP views show. You.
Site data owner	Usually the planner at each site. Fixes the mismatches Milo flags.
IT	Read-only access to SAP and the shared drives. A few hours.
Milo	An account manager and an engineer, for the whole build.

02 · SUPPLY AND DEMAND, ALREADY ON MILO

Not a CDMO yet. The same problem, many times.

We haven't worked with a CDMO. We have built supply and demand views for manufacturers and multi-site operators across Europe, which is the S&OP problem with different labels.

First CDMO on Milo.

That works in your favour. The S&OP views get **built around your line model**, not a template, and you keep everything that gets built. Our engineer spends week one with your planners learning how a campaign, a changeover and a QC release show up in the data.

1. Supply: what each line can make, by week, from the site plans.
2. Demand: what the contracts and orders in SAP need, and when.
3. The gap: utilisation, revenue at risk and when each site runs out of room.

GLOBAL FOOD MANUFACTURER · MIDDLE EAST

Kellogg's

Stock-outs found and fixed

Coco Pops was already the best seller. Milo showed it running out for two or three days at a time in around 25 stores. More stock went in, and more sold.

BREWER · LONDON · SEVEN SYSTEMS

Two Tribes

Connected in two weeks

Sales, stock, finance and retailer data that had never been joined. All seven systems connected in two weeks, 20 dashboards built by the team, no analysts hired.

CONTRACT LOGISTICS · UK AND GERMANY

Multi-site operator

In proof of concept

A daily view of every site's performance that took a team hours each morning, rebuilt so it arrives on its own across sites in two countries.

The longer version Our manufacturing overview covers how Milo runs supply and demand across sites: hey.milo.ai/milo-manufacturing-slides

WHO SEES WHAT

Your customers' data stays theirs.

HOSTING

Frankfurt, AWS

EU hosted, GDPR compliant, and never used to train a model.

CERTIFIED

ISO 27001, SOC 2

Audited every year. Built to the standard European lotteries ask for.

ACCESS

Roles by person

Restrict by site, customer or data type. A planner sees their site, not another customer's programme.

ACCURACY

No AI arithmetic

The model writes the query. The numbers come from your systems, with the working shown.

FOR YOUR IT TEAM

Connections are read-only. Policies, sub-processors and the security pack are at **trust.milo.ai**, and we'll take your IT team through them on a call.

Live in a week. Decide after a month.

BEFORE

IT review

Security pack and a call with IT. Read-only access to SAP, the site plans and Project.

WEEK 0

Connect

Done on our side. The engineer maps lines, materials and customers across the five sites.

WEEKS 1 AND 2

Build

A workshop at your UK office with the site leads on Teams. Utilisation, the gap and the capacity view, built live.

WEEKS 2 TO 4

Test

Run an S&OP review from Milo. Check every figure against SAP. Then decide.

PROOF OF CONCEPT · ONE MONTH

£2,500

Everything connected, unlimited users and use

- A named account manager and engineer
- SAP, the Excel plans, Project and Teams connected
- Nothing owed after month one unless you carry on

Carry on from around **£2,500 to £3,500 a month**, depending on how many people across the sites use it. Monthly, no lock-in.
