“I need to save 2% on labour. Where are the opportunities?”

Milo reads tills, rotas and bookings together, finds the hours that don’t match the covers, venue by venue, and gives each GM the change to make.

Where can we save 2% on labour? Last four weeks, whole group.

I found **£64.1k** over four weeks, which is **2.2%** of a £2.98m labour bill. The 2% target is £59.6k. Nothing here touches Thursday or Friday dinner.

Where the hours are	From	Per 4 weeks
Monday and Saturday rosters built for a weekday trade Paternoster Chop House, Liverpool Street Chop House, Bluebird City, Coq d’Argent	Rota, tills	£21.4k
Closing shifts running well past the last cover Skylon, Madison, German Gymnasium	Rota, OpenTable	£16.8k
Overtime and agency while contracted hours sit unused Quaglino’s, Sartoria Savile Row	Rota, payroll	£14.2k
Private events staffed before they were confirmed Le Pont de la Tour, Butlers Wharf Chop House	Rota, Salesforce	£11.7k
Total		**£64.1k**

Next: Shall I send each GM their rota changes before next week’s rota is signed off, then track what was saved?

Venue names are real. All figures on this page are illustrative. The labour bill is our assumption: 32% of reported revenue, annualised. Your own numbers replace it in week one.

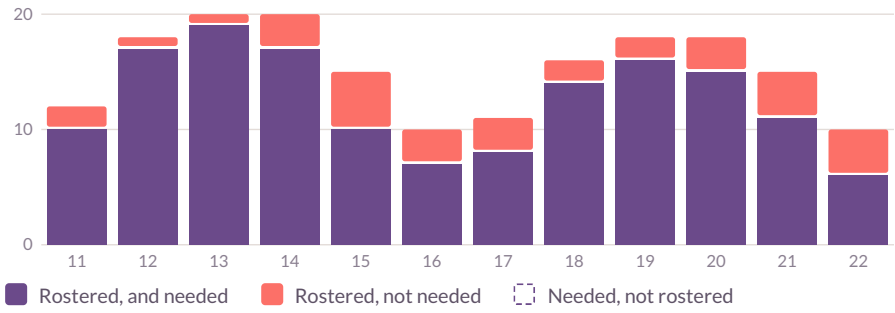

Show me labour against covers, hour by hour. The app we built for Evolv, with both in labour hours: what was rostered and what the covers needed.

Paternoster Chop House, Monday

33 hours

rostered above what the covers needed

A rota built for a City weekday, on a Monday that isn't one. About £2.1k over four Mondays, spread thinly enough that no one sees it on the day.

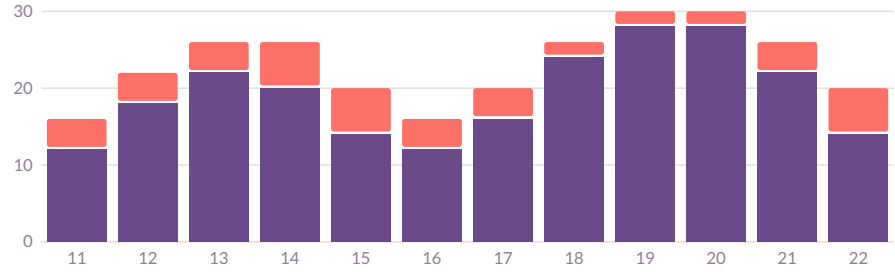

Coq d'Argent, Saturday

48 hours

rostered above what the covers needed

Fuller at dinner than at lunch, but rostered near enough the same all day. About £3.1k over four Saturdays.

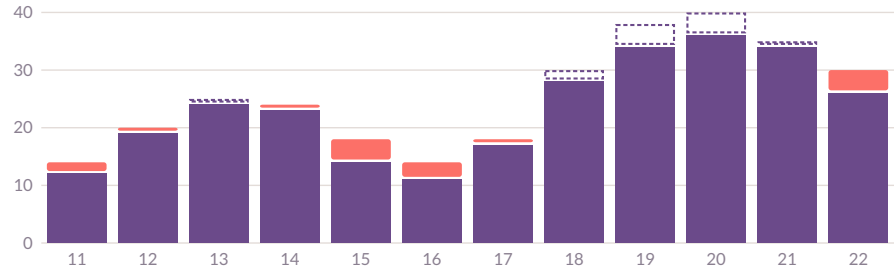

Quaglino's, Friday

12 hours short

at peak, with 16 spare earlier and late

Don't cut this one, move it. Over in the afternoon and after 22:00, short from 18:00 to 21:00. Better service for about the same money.

Next: Each GM gets this for their own venue, and the app only shows them their own. You see all of them.

Raise menu prices 4%, but hold the entry-level mains. Chop House & Tavern, last four weeks.

That's **+£16.8k** on £420k of sales, a true **4.0%**, before any change in mix. Other mains carry most of it at +5.5%, so the first price a guest sees stays put.

Category	Sales, 4 wks	Change	Uplift
Entry-level mains	£64k	Held	£0
Other mains	£148k	+5.5%	£8.1k
Starters	£72k	+4.5%	£3.2k
Sides and desserts	£52k	+4.0%	£2.1k
Drinks	£84k	+4.0%	£3.4k
Total	**£420k**	**+4.0%**	**£16.8k**

Next: Shall I price this dish by dish for sign-off, then compare volumes each week against the same weeks before the change?

From there to the menu itself. Milo writes the priced dishes up as a draft menu for sign-off. We are confirming how far it goes on generated menu artwork, and will show you what it does before you sign anything.

Your data warehouse carries on. Milo doesn't wait for it.

Now

Milo connects directly to your tills, rota, OpenTable and Salesforce. The warehouse project isn't touched and nothing depends on it.

While it's being built

The definitions you agree in Milo, such as labour %, covers and spend per head, are ready to hand to the warehouse build.

When it goes live

Point Milo at the warehouse, read-only. Direct connections stay for anything not in there yet. Your team asks questions the same way.

Milo and Claude

Milo looks like Claude because it runs on Claude and other leading models. The difference is what's built around them for a multi-site business.

	Claude on its own	Milo
Connecting data	Uploads, or connectors you set up and look after	2,500+ integrations. We connect them and keep them running
Across the group	Each person's own chats and files	One set of numbers across every venue, with shared dashboards and alerts
Who sees what	Set tool by tool	By role. Finance sees salaries, a GM sees their own venue
Your data	Depends on plan and settings	Never used for training. Zero data retention. ISO 27001 and SOC 2
Support	Self-serve	Your own account manager and engineer

Other hospitality groups on Milo

ETM Group

Multi-site London hospitality. Their CFO is the best person to ask about it, and we'll set up the call.

Nikki Beach

When a returning guest is in, the team is alerted with the wine they had last time, ready to go to the table.

Urban Leisure Group

Toast, Harri, Marketman, DesignMyNight and QuickBooks in one place. Monday's numbers now arrive as automated scorecards.

Commercials

Proof of concept

£1,500 for the month

- Unlimited users and unlimited usage
- Set up and connected for you
- Run the 2% question on your own data

After that

£1,600 a month, approx.

- Unlimited users, up to 750 queries a month
- Clients typically use 400 to 420
- One month break clause after the proof of concept

Against the 2%

2% of an illustrative £2.98m every four weeks is **about £775k a year**. Milo is about £19k.

The availability calendar and reply list we showed your sales team run on the same subscription.
