Every customer issue, drafted and ready.

Two people spend most of their week on these emails. Milo does the reading, checking and drafting, so your team only has to read, adjust and send.

What your team would open

Customer issues app — Case 14 of 22

Rattan dining set: split weave

Three emails, one customer. Receipt found, in warranty. Minor issue, so a replacement part rather than a return.

Draft to customer

Dear Mrs Hall, I'm so sorry about the weave on your dining set. There's no need to send it back.

Draft to supplier

Code, receipt, photos, PO and customer details.

Send both Softer tone Make it full and final

Illustrative example, not real customer data.

What Milo does with each email

Groups	Seven emails in half an hour become one case.
Checks	The receipt, the warranty for that product, and stock.
Drafts	Customer and supplier emails, in the voice it learns from your sent mail.
Files	Once sent, everything goes in that customer's Outlook folder.

Nothing goes out until one of your team sends it.

Where the technical call left things

Supplier web form	Milo pulls every answer from the emails and photos, ready to paste in. It won't submit the form itself, because supplier sites block automated entries.
WinRetail	We won't wait on an API. We can start from WinRetail exports or Tableau. All we need is for PO and credit note numbers to be available in one of them.
Running cost	Built as an app, emails aren't charged one by one. We measure your real volumes during the proof of concept and set the monthly figure from those.
Security	Only the inboxes you choose are connected. EU servers, ISO 27001, SOC 2 and GDPR, and your data never trains AI. **trust.milo.ai**
After the emails	Five years of till data and 45,000 Loyalty Club members for targeted offers, then stock replenishment and a direct link with suppliers.

£1,700

for six weeks, then £1,800 to £2,000 a month for about 1,000 interactions

The proof of concept

The clock starts once your data is connected. Our engineer and the person who has built this for other clients come to you and build it with your team.

Why now

Six weeks gives you room around Christmas, with the app in place well before furniture season. We measure reply times and hours spent, before and after.
