ABBA Voyage

ABBA VOYAGE · REVISED PROPOSAL · SEPTEMBER 2026

Ask it, build on it, **share it, automate it.**

One platform from the first question to the report people open every Monday. Milo sits read-only on the Fabric model you have already built, connects Klaviyo alongside it, and works to **your definitions, your permissions and your brand.**

SITS ON MICROSOFT FABRIC

KLAVIYO CONNECTED

UNLIMITED USERS

£1,500, ONE MONTH, MONEY BACK

01 · TALKING TO THE DATA

Ask it. **Then ask again.**

A plain-English question comes back as the number, what moved and why, with the tables and the SQL underneath. Then narrow it, split it or ask for a chart. **The model never does the maths,** so the same question returns the same number.

>_ How did admissions and average ticket price move last week against the week before?

WEEK ON WEEK · ADMISSIONS AND YIELD

ANSWERED IN 5 SECONDS

Admissions	21,480	-6.2% week on week
Average transaction price	£66.10	-3.4%
Weekday fill	74%	-9 pts
Weekend fill	96%	+1 pt

The weekend held. The drop is **four weekday evenings**, and inside those it sits in off-peak and group allocation tickets, which is also what pulled the average price down. Weekend demand did not move, so this reads as a weekday allocation and pricing question rather than a demand problem.

dim_ticket_type

Illustrative figures, not ABBA Voyage data. In week one these threads run against your real numbers.

Build, share, automate, in the same place.

Every answer can become something people use every week. One sentence builds the dashboard below. Sharing, the Monday schedule, the alert and the ABBA Voyage theme are set on the same screen.

REPORTS AND APPS

Built with a sentence

Pin an answer and it becomes a live dashboard that refreshes from Fabric. **Ask any tile why it moved.** Apps are screens built for one job, and packs go out as PDF, PowerPoint or Excel.

AUTOMATION

Asked twice, runs on its own

Scheduled packs, alerts when a number leaves its range, a morning brief. Actions such as sending a segment to Klaviyo **wait for approval.**

HOW IT LEARNS

Your business, not your data

It reads the semantic model first. Your team approves definitions as plain sentences, and **a correction becomes a rule for every user.** Nothing trains a model.

SHARING

A link for everything

Every answer, dashboard and app has a link, and **access rules travel with it.** View-only access costs nothing, because users are unlimited.

BRAND AND SETTINGS

Your colours on everything

Colours, logo and typeface on dashboards, packs and emails. **Roles, channels and automations** are all set in one place.

WHERE YOU ASK

Browser, Teams, Slack, email

Same answers, same permissions and **same definitions in every channel.** Nothing to install.

On Fabric. Alongside Klaviyo.

Fabric stays the home for your data. Milo reads it through **one read-only credential** your admin can revoke, with no copy to maintain. Klaviyo connects directly, so "which campaign sold which performances" is one question.

Milo vs Claude: what sits around the model.

Milo uses leading models, Claude among them. What it adds is the connection to your data and everything built on top of it.

	MILO	CLAUDE ON ITS OWN
Getting to the data	Live and read-only on Fabric and Klaviyo, set up and looked after by us.	An export pasted in, or a connector your team builds and maintains.
The number	SQL on the full model, shown. Same question, same number.	Works from what fits in the chat. Hard to repeat or audit.
Definitions	Set once, used by every user.	Explained again in each chat, by each person.
Reports	Live dashboards, apps, schedules and alerts.	A snapshot, rebuilt when the data changes.
Access	Per person, row-level, every question logged.	Whoever has the file has the data.

Your data stays yours, and stays where it is.

Six things an IT team asks before anything connects.

ACCESS

Read-only, per person

Milo reads Fabric and never writes to it. Row and column permissions are enforced at the data layer, so a question outside someone's access **returns nothing**.

AUDIT

Every question logged

Every question, answer, share and action is logged with who did it. Single sign-on and multi-factor authentication as standard. **The sanctioned alternative** to a personal AI account.

RESIDENCY

UK and EU hosting

Data stays in region and goes nowhere you have not agreed to. **Your own tenant** is an option if policy prefers it.

TRAINING

Never trained on

Your data is not used to train models, by us or by the model providers, with zero retention. **It is written into the contract.**

MODELS

The best model for each task

Each task goes to the best current model, Claude and Gemini among them. **Inference runs on our servers**, not the open internet.

CERTIFICATION

ISO 27001 and SOC 2

GDPR, ICO registered and independently pen tested. **The certificate and reports** go to your IT team before anything connects, and sit at trust.milo.ai.

06 · BUILD PLAN AND COSTS

One month to prove it. The same team after.

A deployed engineer and an account manager, in a shared Teams or Slack channel, building alongside your team. **They stay with you after the month**, for as long as you use Milo.

WEEK 1

Connect

- Fabric and Klaviyo live, definitions drafted

WEEK 2

Validate

- Twenty questions you know the answer to, checked

WEEK 3

Build

- Dashboards, an app, the first automations

WEEK 4

Decide

- The wider team using it, then a decision

START HERE

£1,500

ONE MONTH · PROOF OF CONCEPT

- **A deployed engineer** and an account manager from day one
- Your real questions on your real model
- **Full money back** if the team is not satisfied

To start: liam@milo.ai

AFTER THE MONTH

£1,500

 per month

APPROXIMATE, FOR A COMPANY OF YOUR SIZE

- **The same engineer and account manager**, throughout
- **Unlimited users**, not per seat
- Dashboards, apps, sharing and automation included
- F&B, merchandise and anything else connected later
