

Webbs Garden Centres – AI Solutions Partner

Board presentation, 30 September 2026

Tom Pickett and Philipp Buschhaus

Milo: an AI data platform and assistant, with a team that works alongside you

35

customers

10

proofs of concept
running now

13

people in the team

£2.9m

raised
including from EWOR and
InReach Ventures

- SOC 2 Type II and ISO 27001 certified, hosted in the EU

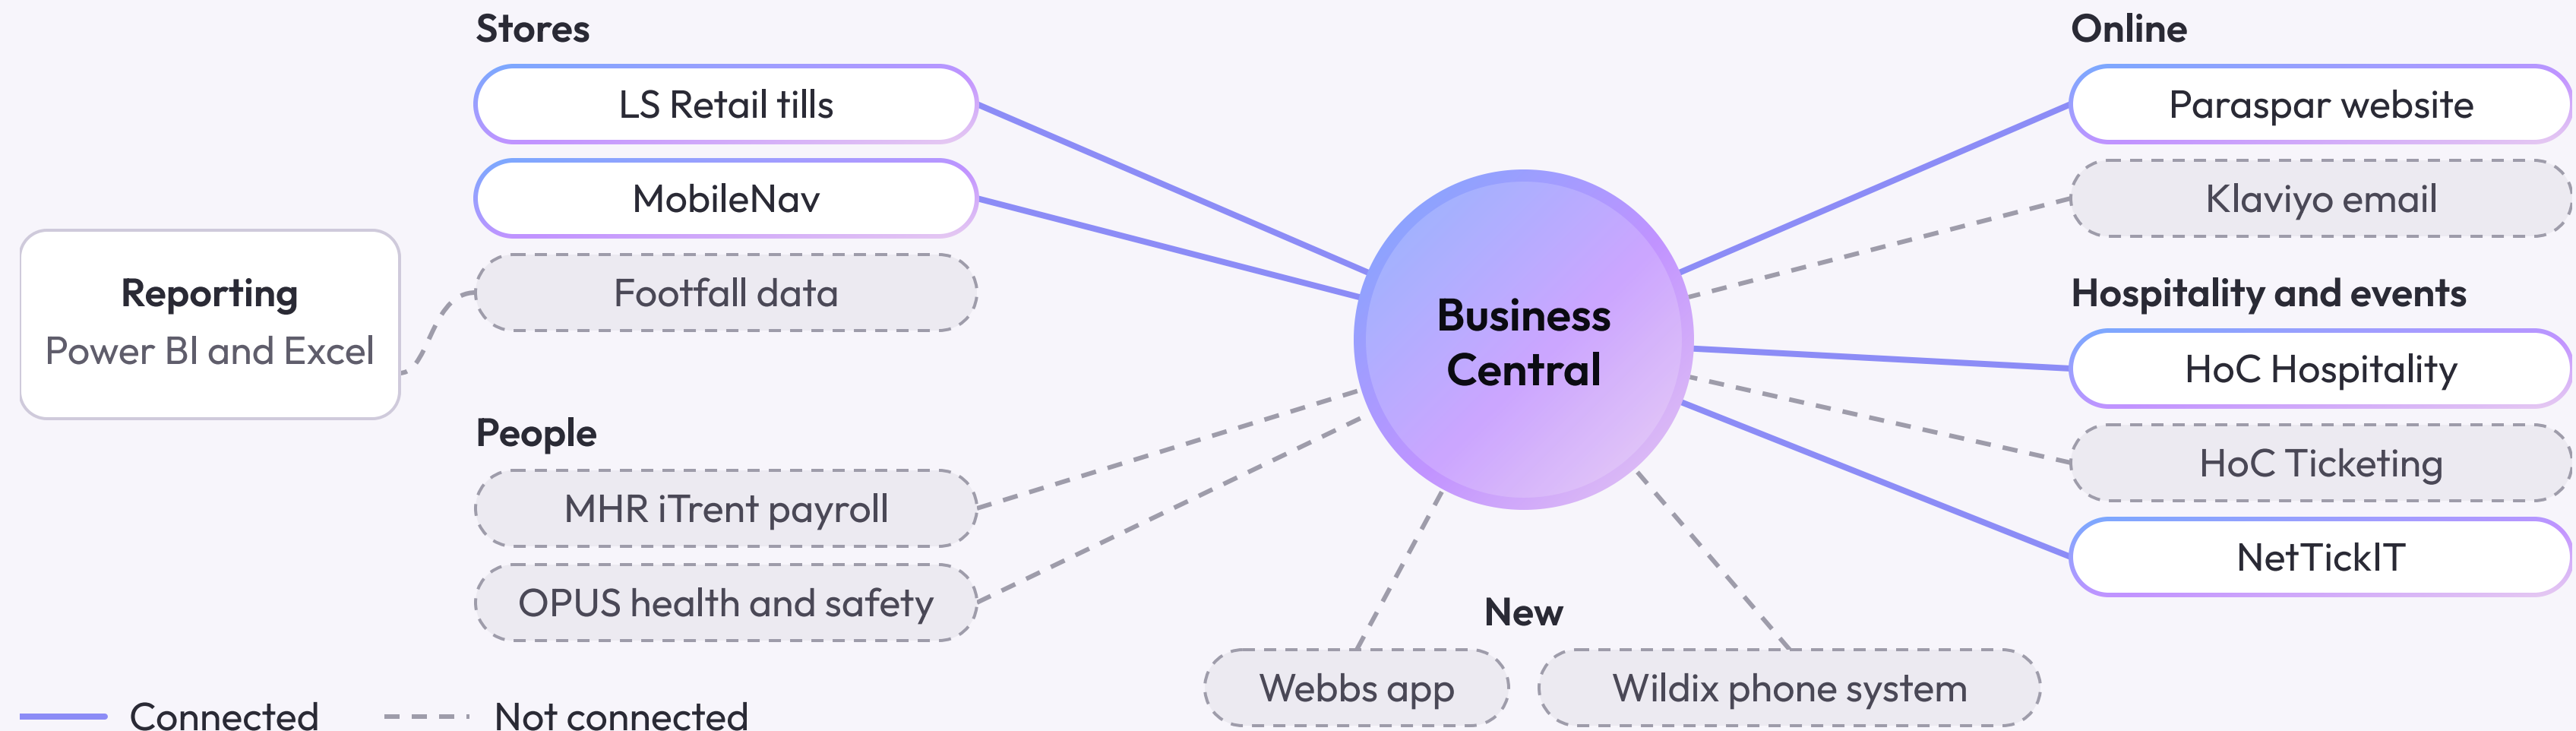

Your five priorities

Priority	What you want	Worth each year
Wages	Spend 25p of every £1 of sales on wages, not 27p The right people, in the right place, at the right time	£700k
Gross margin	Keep 2p more of every £1 of sales as profit	£700k
Growth	Better ranging and replenishment, and online plant sales	Sized in the first weeks
Customers	One view of each customer, in store, online and at events	Sized in the first weeks
Ways of working	Simpler procedures, and less manual work	Time back for managers

Wages and margin together: about **£1.4m a year**, based on £35m turnover.

Your information sits in more than ten systems, and about half of them are not connected

Standard reports only answer the questions they were built for.

One-off questions go to Excel, and depend on a few people.

Wages, sales, footfall and customer data cannot easily be seen together.

With Milo, every system is connected, and all your information is in one place

Business Central stays where it is.

Replaces Power BI and your existing reporting tools.

Wages, sales, footfall and customer data seen together.

One place for all your information, and an assistant your teams can use every day

Connects everything

- All your systems, with history
- Business Central stays as it is
- You own the data

Answers questions

- Plain English, in Teams, email or web
- Explains why, not just what
- Dashboards built by asking
- Board packs as PDF or PowerPoint

Takes action

- Daily alerts to store managers
- Scheduled reports
- Forecasts and recommendations
- Simple apps, such as a store manager's daily screen

What this means in practice

No separate data warehouse project. Milo is the data platform.

Replaces Power BI and your existing reporting tools.

Unaffected by the Business Central upgrade.

One approved AI tool for all colleagues.

Your priorities, and what Milo would do for each

Priority	What Milo would do	Information used
● Wages	Staff by hour and department, from sales, footfall and weather	iTrent, tills, footfall, weather
● Growth	Ranging, replenishment, online plants, weather scenarios	Business Central, tills, website, nursery
● Customers	One customer view, Club Card targeting, member app	Loyalty, Paraspar, HoC, NetTickIT, Klaviyo
● Gross margin	Daily margin, competitor prices	Business Central, tills, competitor websites
● Ways of working	Automated reports, simpler procedures	OPUS, Wildix, all of the above

Ways of working: taking slow, manual work off your teams

Finance

Invoice processing

Match supplier invoices to orders and deliveries in Business Central. Flag exceptions for approval.

Stores

Goods in

Check deliveries against purchase orders. Flag short or incorrect deliveries straight away.

Operations

Rotas

Draft rotas by department and hour, from forecast sales, footfall and weather.

Marketing

Club Card members

Find members who have stopped visiting, and prepare targeted offers through Klaviyo.

Buying

Competitor prices

Weekly price check against competitors, with a list of lines to review.

Board

Board pack

Daily trading summary and monthly board pack, produced automatically.

In the first two weeks we ask each department for the five tasks that take too long, and agree which to automate first. Your team approves anything that changes a system.

Live demonstration

Live before Christmas: connected in two weeks, everything running by week four

We set everything up with you, onsite at Wychbold. Each change is tested first, and approved by your team before it goes live.

How we choose, test and measure

Choosing	By value to Webbs and speed. Order agreed with you.
Testing	One or two stores first, then rolled out.
Measuring	Baseline agreed in the first two weeks. Progress reported monthly.
Making it last	Alerts and reports arrive in Teams. We follow up with anyone not using it.

We need from you: system access, your definitions, trading calendar and categories.

Example: a store manager's 8am message in Teams

 **Milo** 08:00

Good morning. Yesterday, wages were **27.8%*** of sales, against a 25% target.

Staffing was above footfall from 2pm to 4pm. Worth checking this Saturday's rota.

*Illustrative figures, not customer data.

We set it all up for you, and stay with you

Our team	Sets everything up, onsite at Wychbold, and does all the technical work.
Training	Hands-on sessions at Wychbold for the Board, managers and head office.
Your IT partners	We share our approach and welcome their review.
Your managers	One person, an hour a week. Four to six early users.
A Board sponsor	One named person who receives the progress reports.

Named people, and a direct line to them

Andrew Round
Account manager

Rakshith
Dedicated engineer

Philipp Buschhaus
CTO

Tom Pickett
Commercial lead

Message us in Teams, Slack or WhatsApp whenever you need help. We reply within the hour.
Onsite at Wychbold as often as you need.

Your data stays yours, and people only see what they should

SOC 2 Type II and ISO 27001.
Penetration tested.

Hosted in the EU.

Access set by role, agreed with
your data protection officer.
Only named people see payroll.

A full record of who asked what,
and when.

You own your data: export or
delete it at any time.

Full due diligence and security
pack after this meeting.

Results for similar businesses

Kellogg's

Global cereal and snacks brand.

Set up inside their own systems, with each person seeing only what they should.

Marico

International consumer goods business (Parachute, Saffola).

Users built and tested their own volume-forecasting app.

Coolr

150 people, no data team, after a Power BI rollout that did not work.

Live in the first week.

BetGames

Regulated gaming.

Report turnaround from three days to three minutes.

“Like having a data engineering team, but better.” Coolr, COO

Reference calls available with our customers.

A simple monthly price, with the team included

Set-up	Connect all your systems with history, baseline, training at Wychbold	£4,000 one-off
Milo	All connections, all sites and users, your account manager and engineer	£2,500 a month
Milo with data platform	As above, plus all your history in one place	£3,500 a month

- 13-month agreement.
- Both replace your Power BI licences.
- Fixed monthly price: no charges for usage, questions or tokens.
- No separate charges for storage, data transfer or support.

About **£50k a year** in total with the data platform, against a combined target of around **£1.4m a year** in wages and margin.

Bringing wages down by 0.15 of a percentage point would cover the full annual cost.

£1.4m

£50k

Next steps

- 1 Your decision on an AI Solutions Partner.
- 2 Reference calls and due diligence pack, this week.
- 3 Start w/c 12 October, onsite at Wychbold. Everything running by 6 November.
- 4 Board read-out w/c 16 November. Everything in place for Christmas.
