

WHICH VIPS ARE **SLIPPING**, AND DID THE ONES WE WON BACK STAY?

Ask it in plain English. Milo connects to Bingoal's SQL database, the Power BI datasets and Optimove, and answers on live data. **No Excel export in between, and no briefing to write.**

Hosted in Frankfurt

ISO 27001 and SOC 2

Read-only connections

Never trains on your data

TOP 50 VIPS

7 SLIPPING

WON BACK IN JUNE

61 OF 96 STILL PLAYING

NEW VIPS IN SEPTEMBER

23 ▲

YOU

Give me this month's recovery list for lapsed VIPS. And how are the ones we won back in June doing now?

184 lapsed VIPS worth a call. Of the 96 won back in June, **61 are still playing** and 19 have slipped again.

JUNE'S 96 RECOVERED VIPS, TWELVE WEEKS ON

Playing, at or above their old level		38
Playing, staking less		23
Slipped again		19
Closed or excluded since		16

WHY, AND HOW I GOT THERE

- Lapsed is measured against **each player's own rhythm**: no bet for three times their usual gap. A weekend punter and a daily player go quiet differently.
- **27 players are left off the list automatically**: self-excluded, on a cool-off, at a deposit limit or flagged by the responsible gaming team. Milo reads those flags from the same database.
- VIPS who came back after **a call from their host are holding at 74%**. Those who came back on an email alone are at 51%.

SQL • Players

SQL • Bets and transactions

SQL • RG flags

Optimove • Campaigns

I can save this as a live recovery dashboard, send the 184 to Optimove as a target group, and tell each host the moment one of theirs comes back and bets. **Nothing goes out until you approve it.**

Build the dashboard

Show me the list first

ILLUSTRATIVE FIGURES

Every number, player and host in these answers is sample data shaped like a VIP desk, not Bingoal's. During the proof of concept the same questions run against your own database.

YOU Which of my top VIPs are betting less than they normally do?

7 of your top 50 are down more than 40% on their own four-week average. Three of them went quiet after a withdrawal that took over 48 hours.

FIVE OF THE SEVEN, BY VALUE · STAKES PER WEEK

PLAYER	HOST	MARKET	4-WEEK AVG	THIS WEEK	SIGNAL
 VIP-0482 DIAMOND	Host A	BE	€6,200	€1,450	Slow withdrawal
 VIP-1177 DIAMOND	Host B	NL	€4,900	€1,100	Slow withdrawal
 VIP-0093 PLATINUM	Host A	BE	€4,100	€0	No login, 9 days
 VIP-2210 PLATINUM	Host C	BE	€3,800	€1,900	Slow withdrawal
 VIP-0731 GOLD	Host B	NL	€3,300	€1,600	Football break, normal

WHY, AND HOW I GOT THERE

- Each player is measured against **their own rhythm**, so a quiet week from a weekend-only player does not raise a flag.
- I joined bets to the payments table. **Three of the seven had a withdrawal pending for more than 48 hours** in the week before they dropped. Nobody had linked the two.
- VIP-0731 bets football only and it was an international break. Down, but normal, so no flag.

YOU How many new VIPs did we get this month, and what brought them in?

23 new VIPs in September, up from 14. Eleven of them came in through the same door: the new game that launched on the 4th.

FIRST PRODUCT PLAYED BY SEPTEMBER'S NEW VIPs

New game, launched 4 Sep		11
Sportsbook · football		5
Slots		4
Horse racing		3

WHY, AND HOW I GOT THERE

- A new VIP is a player who **crossed your tier threshold for the first time** this month. The definition lives in Milo's knowledge base, so everyone gets the same count.
- The eleven from the new game are **staking 1.8 times** what a typical new VIP does in the first two weeks, and nine of them are Dutch.
- Marketing spend did not move in the period. The launch did the work.

KEEP CLAUDE. PUT MILO ON THE DATA.

Claude is a very good general assistant, and Milo runs on models like it. What takes the work is a safe, live line into Bingoal's database, with the definitions, permissions and alerts that sit on top. That is Milo.

	MILO	CLAUDE ON ITS OWN
Getting to the data	Connects read-only to the SQL database, the Power BI datasets and Optimove. Live inside a week, and our engineers look after the connections.	A manual Excel export each time, or a connector your IT team builds, secures and maintains.
How the number is produced	Milo writes the query, runs it on the full database and shows the SQL. The model never does the maths, so the same question returns the same number.	Works from the file in front of it. Good for a one-off, hard to repeat or audit.
Bingoal's definitions	VIP tiers, active, lapsed, GGR and NGR, time zones, all held in a knowledge base. Set once, used in every answer, for every user.	Explained again in each chat or project, by each person.
Dashboards	Live and shareable. Ask any tile why it moved, and change one chart without touching the rest.	An artifact is a snapshot. New data or one change means building it again.
Alerts	Watches the data and messages the host on Teams, WhatsApp or email when a VIP drops.	Answers when someone asks.
Access and audit	Roles and row-level security: a Dutch host sees Dutch players, an analyst sees no names. Every question is logged.	One shared team account. Whoever has the file has the data.

AND POWER BI The reports you brief and wait for get built in Milo, by you, in minutes. **Milo has its own dashboards and apps, so when the analysts come on, Power BI goes and the ticket queue goes with it.** From day one Milo can also read the Power BI datasets they already trust.

BUILT FOR A LICENSED OPERATOR IN BELGIUM AND THE NETHERLANDS

WHERE IT RUNS

Milo's EU cloud in Frankfurt. Read-only connections, and an NDA signed before anything connects. Already running for clients in the Netherlands.

WHAT NEVER HAPPENS

No training on your data. Nothing sent to OpenAI or any outside AI service. Models run inside Milo's own cloud under zero data retention.

WHO SEES WHAT

Roles, row-level security and single sign-on. ISO 27001 and SOC 2, with the documents at trust.milo.ai.

BUILT INSIDE GAMING. RUNNING ACROSS IT.

Milo was started by the CEO of BetGames, who was tired of waiting days for his own numbers. Around a dozen operators, studios and platforms run on it now.

LIVE DEALER GAMES · MULTI-MARKET

BETGAMES

Reports: 3 days → 3 minutes

Two years in, across 15 TB of live data. Milo emails surveillance the hour a player lands a big win, and watches flagged players so an alert fires the moment one returns and bets. Campaign ROI is scored against a control group.

GAMING PLATFORM · SOUTH AFRICA

INTELLIGENT GAMING

800+ actions a day

Monthly reporting and player marketing across more than 30 operator brands: SMS list analysis, send-time segmentation and copy optimisation, all asked in plain English.

ONLINE SPORTSBOOK AND CASINO

7BET

An operator, like Bingoal

Running on Milo today, and happy to tell you how they use it.

GAME STUDIO · MALTA

OCTOPLAY

Used for just about everything

They fed in their gaming data with the promotions on top. The team now reaches for Milo every day.

NATIONAL LOTTERY · LITHUANIA

LOTO.LT

Outsourced report → minutes

Milo reproduced a predictive report they had been paying an outside firm to produce, under a regulator that sets the bar for data handling.

CASINOS AND HOTELS · SOUTH AFRICA

TSOGO SUN

Live on their data warehouse

Signed and live. Milo sits on their SQL Server warehouse for analysis, dashboards and reporting.

REFERENCE CALLS We will put you in touch with any of these teams before you decide.

ONE MONTH. £1,500. THEN YOU DECIDE.

A working deployment on Bingoal's own data. We sign an NDA, connect the SQL database or the Power BI datasets, plus Optimove, read-only, and build the first dashboards with you. **Leave the most sensitive tables out if you prefer.**

Start with the VIP desk. If it earns its place, the data analysts come on with a settings change, and there are no seat licences to buy.

£1,500

One-month proof of concept, everything included

- ✓ NDA first, then two or three sources, read-only
- ✓ Recovery dashboard and drop alert in week one
- ✓ Your definitions captured: VIP tiers, active, lapsed
- ✓ Unlimited users, no seat licences
- ✓ A direct line to our engineers all month

No commitment beyond the month. Ongoing pricing is agreed at the end, from real usage.

Reply to Tom · tom@milo.ai

DAY 1

NDA signed, kick-off call, sources agreed.

WEEK 1

Connected. Recovery dashboard and drop alert live.

WEEKS 2 TO 3

Definitions tuned, Monday brief live, team invited.

WEEK 4

Review real usage together. Carry on, or walk away.
