

MILO FOR NIO COCKTAILS

Bloom & Wild just doubled the Christmas order. Can we make it?

Today that answer takes a weekend in Google Sheets. Milo reads the order, every recipe and the stock in Horsham, and tells you what to make tomorrow, what to buy and what to say to the customer. **Then it does the parts you approve.**

YOU Bloom & Wild have doubled the Christmas order. 3,000 Mai Tais and 3,000 Daiquiris, out by 8 October. Can we make it?

Yes, if you split it. There's Ron Santiago for 3,000 of one, not both. *Make the Daiquiris tomorrow and order 125 litres of rum today.*

POUCHES ORDERED	RUM NEEDED	RUM IN HORSHAM	SHORT
6,000 was 3,000	285 L	160 L	125 L

LIQUIDS FOR THE WHOLE ORDER · LITRES			
LIQUID	NEEDED	HORSHAM	
Ron Santiago rum	285	160	-125
Orange liqueur	45	120	OK
Orgeat liqueur	36	40	OK
Lime	99	110	OK
Sugar syrup	30	55	OK
Mai Tai uses 45 ml of rum per pour, Daiquiri 50 ml . Either one fits in 160 litres. Both don't.			

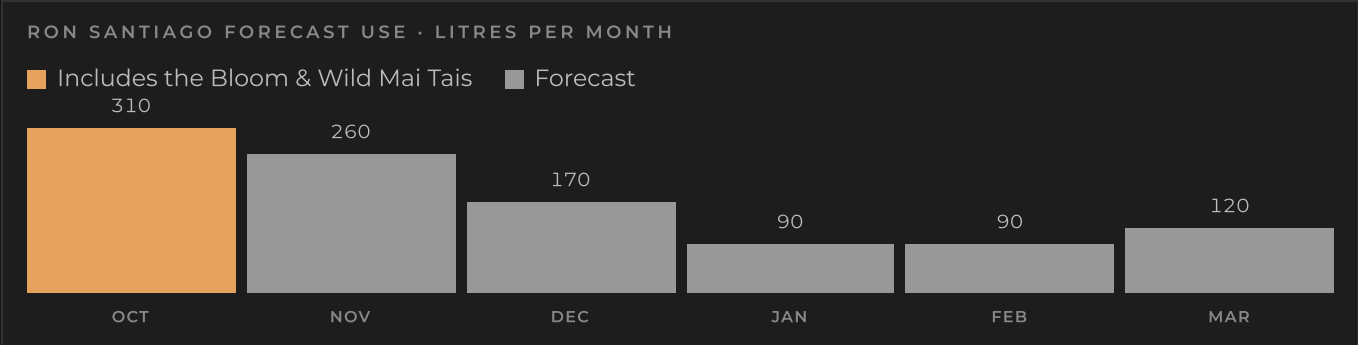

THE PLAN	
FRI 25 SEP	Make 3,000 Daiquiris. Uses 150 L of rum, leaves 10.
MON 28 SEP	Daiquiris out. Half the order, ten days early.
MON 5 OCT	Rum lands. 125 L on the consolidated truck, ordered today.
TUE 6 OCT	Make 3,000 Mai Tais. Uses the last 135 L.
WED 7 OCT	Mai Tais out. A day before the deadline.

HOW MILO GOT THERE

- **Multiplied out every recipe** at 100 ml a pour, then checked each liquid against this morning's Zoho stock. Berlin stock is left out: it is duty suspended and held for EU orders.
- **Priced both trucks.** Direct gets the rum here Tuesday for £640 more. Consolidated still makes the date with a day spare.

YOU We're short on rum anyway. Do we buy a 200 litre drum or a 1,000 litre IBC?

Take the IBC. You'll use **1,040 litres by the end of March**, rum doesn't spoil, and it's £3,300 cheaper than buying the same in drums.

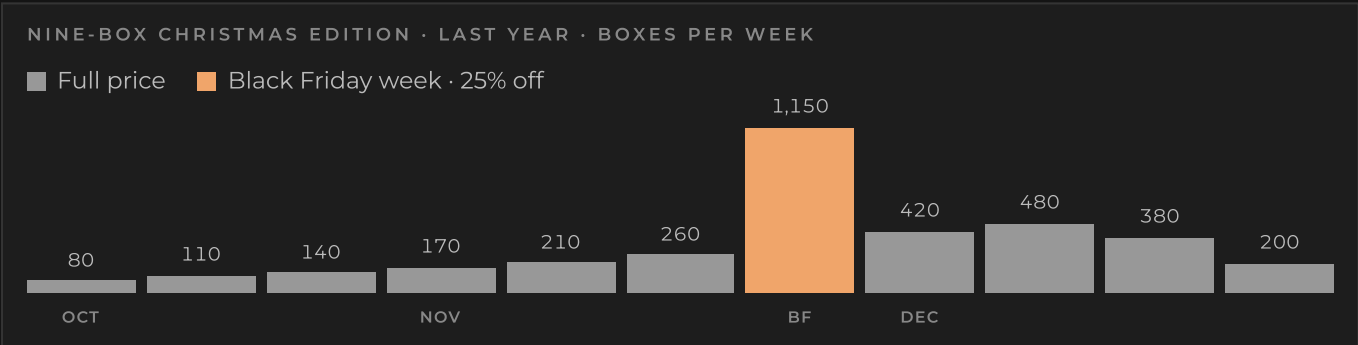

5 × 200 L DRUMS	1 × 1,000 L IBC
£15.40 / L	£12.10 / L
£15,400 for 1,000 L. £3,080 per drum, bought as you go.	£12,100 for 1,000 L. Paid up front, lasts into March.

THE CATCH

It's **£12,100 out of the bank in October** instead of £3,080. If cash is tight before Christmas trade invoices land, buy one drum now to cover this order and the IBC in November. That keeps most of the saving.

YOU How many nine-box Christmas editions do we need this year?

Plan for **4,250 boxes**. You've built 1,300, so 2,950 to make: 26,550 pouches.

THE WORKING LINE	BOXES
Last year, full-price weeks	2,450
This year's growth on full-price weeks	+18%
Full-price weeks, this year	2,890
Black Friday, same offer, same growth	1,360
Plan	4,250

ILLUSTRATIVE Recipes, stock, prices, lead times and sales on this page are made up to show the working. Connected to your data, the numbers are yours.

Dashboards are the easy part. *This is the doing.*

A trade order comes in by email. Milo checks it against recipes and stock, confirms the date with the customer, sends it to fulfilment and raises the invoice in Xero at that customer's prices. People step in where you've said they should, and nowhere else.

ORDER	CHECK	CONFIRM	SHIP	INVOICE
Email lands. Lines and date read.	Recipes against Horsham stock.	Customer told the pick date.	Order sent to fulfilment.	Raised in Xero at their prices.

HOW IT'S WRITTEN IN MILO

When a trade order arrives by email:

1. Read the lines and the delivery date.
2. Check every cocktail against recipes and Horsham stock.
 - All there: confirm, send to fulfilment, invoice.
 - A liquid short: plan the split, draft the PO, ask ops.
 - No price in Xero: stop and ask finance.
3. Post every step in the ops channel.

Each fork is a rule you set in plain English. Change a rule and the flow changes. Zoho is only ever read, never written to.

The doubled Christmas order from above.

ORDER	3,000 Mai Tais and 3,000 Daiquiris, out by 8 October.	MILO
CHECK	Rum short by 125 L. Split plan and rum PO drafted.	MILO
CONFIRM	Ops approves the split and the PO from their phone. Customer note sent.	YOU APPROVE
SHIP	Daiquiris to fulfilment Monday. Mai Tais held for 7 October.	MILO
INVOICE	One invoice per shipment, each raised on dispatch.	MILO

What lives in the spreadsheets *and in people's heads.*

The answers above only work because Milo knows how NIO buys, makes and ships. That knowledge sits in one place, written down once and kept current, rather than rebuilt by hand every time a new order changes the plan.

HELD AS	FOR EXAMPLE
RECIPES Every cocktail as a 100 ml build, one row per SKU. Change a SKU once and every forecast uses the change.	Mai Tai: 45 ml rum, 15 orange liqueur, 12 orgeat, 13 lime, 15 water.
SUPPLIERS AND LEAD TIMES Who supplies each liquid, how long it takes and what drives the wait.	Cocchi vermouth: harvest, pressing, then a three week truck. Six weeks.
BUYING RULES When to round up, when to top up, and what never spoils.	Spirits: buy the IBC when six months of forecast covers it. Perishables: buy to the run.
FREIGHT Direct or consolidated, cost against days.	Consolidated by default. Direct only when the date needs it.
WHERE STOCK SITS Horsham through Zoho, Berlin separately, duty paid and duty suspended kept apart.	Berlin: duty suspended, EU orders only. Topped up from the UK by pallet.
THE CALENDAR Promotions, discount weeks and trade shows, so sales history is read in context.	Black Friday at 25% off is a promotion, not the new normal.

SHEETS, AIRTABLE OR OURS Milo reads the recipe and supplier tables wherever they live. Moving to Airtable, it connects. Rather not run another database at all, Milo can hold the tables itself.	NOTHING HANGS ON ONE PERSON Milo is a platform with an account manager and an engineer behind it. Your team can see every table, every rule and every step it took.	THE DATA IS INGESTED Stock, orders and sales are synced into Milo every five minutes to every hour. Calculations run in code on your data. The model never does the maths.

Drinks brands *running on it now.*

BREWERY, TAPROOM AND WHOLESALE · LONDON

Two Tribes

1 to 12 users in six weeks

Seven systems that had never spoken to each other. Now sales, finance and production build their own views, and finance gets a message the day an invoice goes overdue.

BETTER-FOR-YOU BEER · UK

Prime Time

Wholesale, Amazon and its own shop

Lager, IPA, fruit beer and alcohol-free, with 30% fewer calories. Sold through wholesale, Amazon and its own shop, with every channel in one place on Milo.

BREWERY, TAPROOM AND VENUE · COVENTRY

Dhillon's Brewery

14 beers, 240+ events a year

Independent since 2015. Beer brewed in Coventry, shipped across the UK, poured in its own taproom and sold at gigs, tours and private hire, all read from one place on Milo.

One month on your *live orders.*

Built around the blocks you map out after the shows. Zoho, Xero, your fulfilment platform, Shopify and the order inbox connected, the recipe and supplier tables loaded, and the first order flow running on real orders, **with a person approving every step until you trust it.**

Start in October and the flow has run on real trade orders before the Christmas peak.

£1,500

ONE-MONTH PROOF OF CONCEPT · EVERYTHING INCLUDED

✓

Every system connected, Zoho read-only

✓

Recipes, suppliers, lead times and buying rules loaded

✓

The order check and your first automation, built with you

✓

Unlimited users, no seat licences

✓

An account manager and an engineer all month

Stop at the end of the month and nothing more is owed.

WEEK 1	WEEK 2	WEEK 3	WEEK 4
Systems connected. Recipes, suppliers and stock locations loaded and checked.	The order check answers against real orders. You test it on orders you've already planned by hand.	The first flow runs, from order email to Xero invoice, with approval at each step.	Approvals come off where you're happy. Carry on, or walk away.
