PROPOSAL FOR CHARACTER.COM

Seventeen years of data, finally working for you. And we're with you all the way.

14,000 SKUs across 14 markets. Milo joins it up, gives everyone the same numbers and shows its working. We set it up, check it against what you trust today, and stay beside you while it beds in.

Amazon | character.com | Next and marketplaces | NetSuite | Linnworks | Power BI, replaced

Numbers you can check

Milo · Monday 07:00 · emailed to the leadership team — Ties to NetSuite

YOU **How did last week go, by market and platform?**

MARKET · PLATFORM	NET SALES	MARGIN	VS LAST YEAR
UK · Amazon	£148,200	31.4%	+12%
UK · character.com	£62,900	38.9%	+6%
Germany · Amazon	£41,300	27.2%	-9%
US · Amazon	£36,800	24.6%	+18%
UK · Next	£19,400	29.8%	+3%
All markets	**£308,600**	**31.6%**	+8%

Germany by category | Export to Excel | Send to the board

HOW MILO GOT THIS

- ✓ **Net sales match NetSuite** for the week, to the pound.
- ✓ **Counted on dispatch date,** as your ledger does. One click switches to order date.
- ✓ **Margin is your definition:** net of refunds and platform fees, written down once and used by everyone.
- ✓ **Every source listed,** down to the table and the rows, so anyone can check the working.

Illustrative figures. With your data connected, this runs on your real trading.

The questions that matter

Will the numbers be right?

Before anyone relies on it, we run Milo side by side with NetSuite and your weekly reports until they agree. Calculations run on your full data, never guessed by the AI. Two people asking the same question get the same answer.

What if it gets something wrong?

You tell it once, in plain English: "category means the NetSuite category." It remembers for the whole business. A national lottery's analysts checked every answer at first. After a few weeks they stopped needing to.

Is our data safe?

Hosted in Frankfurt, GDPR compliant, **ISO 27001 and SOC 2**, penetration tested. Never used to train anyone's model. Each person sees only what their role allows, so salaries and top-line numbers stay private.

Do we have to connect Amazon pricing?

No. Milo recommends prices for 500 lines across every market and hands you the file in your existing upload format. A person checks it and uploads it. Nothing changes until you decide.

Your first month, step by step

Days 1 to 3	**Connected, history in** A kickoff call, a couple of keys, and we connect everything. As many of the seventeen years as you want. Your month starts once it's all in.	**Our engineer does it** Nothing technical for you.
Week 1	**Kickoff day at your office** Your account manager comes to you. Boardroom, laptops out. Agree your definitions of margin and category, then check Milo against NetSuite together.	**In person, at your office** A daily call while it beds in.
Week 2	**The weekly view, built with you** The Monday trading view by market, platform and category, built on a call so you see how. Then a finance view and a business view for the leadership team.	**Built with you** You learn by watching, not by training.
Week 3	**Stock and pricing** Stock against demand in each market, what to send where, and first price recommendations to check by hand.	**Both of us, with you** Your lead times and stock rules added as you go.
Week 4	**Three or four more people, then decide** The keen ones from merchandising, marketing and finance, each with dashboards ready. Then keep going or walk away.	**Your call** No obligation to carry on.

Someone to call, always

The same account manager stays with you after the month, on Teams, email or WhatsApp. If a connection ever drops, we tell you and fix it before it reaches a report.

Who we are

Built by the founder of BetGames, who was tired of learning what happened a week late. Backed by a £3m seed round. Used by national lotteries, global brands and online retailers.

People who made the same call

Built Different

An online clothing retailer. Their old pack overstated profit threefold. Milo caught it, and £220k of unposted invoices, in month one.

Kellogg's

Their best-selling cereal in the Middle East ran out in 20 stores every month. Milo spotted it in the stock data.

A national lottery

Billions of rows, no room for error. Analysts checked every answer at first. Now they rely on them.

What it costs

PROOF OF CONCEPT

£2,000 one month

Every system connected, your account manager on site, an engineer throughout.

AFTER THAT

£2,500 a month

Around 50 people at head office, every day, in place of Power BI. No hidden costs.

Start this month and you trade Black Friday, 27 November, with every market on one page.
