PROPOSAL FOR APPEAR HERE

FIND THE IDEAS IN YOUR DATA

Years of bookings, spaces, landlords and brands that nobody has time to read. Milo does. It puts it in plain English, asks the questions nobody thought to, and nudges each team toward the next booking.

AWS · Google Workspace · Pipedrive · Google Ads · Meta · LinkedIn · GA4 · Looker, replaced

Milo · Monday 08:00 · sent to #space-team — UNPROMPTED

Which spaces are booking under local market rent?

Three spaces are priced well under the street. Your last 12 months of day rates against listed retail rents nearby.

SPACE	YOUR RATE, AS MONTHLY	LOCAL MARKET	GAP
Balham, high street unit	£6,400	£8,900	−28%
Dalston, Kingsland Road	£7,100	£9,200	−23%
Peckham, Rye Lane	£5,800	£7,300	−21%

Brands here stayed 34 days on average, against 12 for the area. Raise the rate on the first two. Peckham sat empty 19 days this quarter, so push demand there first.

Draft the landlord note · Update the day rates · **Shortlist brands for Peckham**

Illustrative figures. With your data connected, this runs on your real bookings.

PROOF OF CONCEPT

£1,500 / one month

Live	**Within a week**
People	**Everyone, unlimited**
Where	**Web, Slack, WhatsApp**
Looker	**Replaced**
Workshop	**In person, London**

Then about £1,500 a month for 10 to 12 people. No obligation to carry on.

INSTANT BOOK

A LITTLE ABOUT MILO

"Can you pull this number for me?"

Anyone asks it directly

The daily data requests in Slack go. People ask Milo and get the answer in seconds, and whoever used to run them gets their day back.

"Let me check back at the office."

The numbers on the road

Ask on WhatsApp before a meeting: how has this brand booked, what does this street rent for? Milo checks against market rents online.

"We only want ten days."

Proof for a longer booking

Brands like this one booked 30 days or more. Account managers have the proof in hand while the brand is still deciding.

"What could my space earn?"

A landlord pitch in a minute

Comparable spaces, day rates against their current rent, likely occupancy and brands who booked nearby. Ready to send.

Marketing too. Connect Google Ads, Meta, LinkedIn and GA4, and Milo shows which campaigns, editorial and events bring in brands that book, not just clicks.

HOME TRUTHS

"Will the team use it?"	Usually two or three people start and use it all day. Others see what they've built and ask how. We speed that up: an in-person workshop in London, a shared Slack channel with our engineer, and **the first alerts set up with you**, so the signals arrive without anyone remembering to ask.
"Our data is messy."	Milo works on it as it is. Where something needs explaining, tell it once in plain English, "a booking under seven days is a short let", and it remembers. We work with national lotteries running billions of rows. Five million is comfortable.
"We already have Claude."	Milo runs on models like Claude. The difference is everything around the model: **live connections** to your data, **the same answer** whoever asks, calculations run as queries on the full data rather than by the model, and **permissions per person**, so each team sees what it needs and nothing else.
"And Looker?"	Milo replaces it. Dashboards are built by asking for them, change when you ask, and every chart can be questioned: why did occupancy drop in Soho last month? One subscription instead of two.

HOW THE MONTH RUNS

WEEK 1
Connected
AWS, Google, Pipedrive and the ad platforms in. Two or three people asking questions.

WEEK 2
Workshop
In person in London. First dashboards, apps and alerts built together.

WEEK 3
Wider team
Account managers and sales on, each with the right permissions.

WEEK 4
Decide
Looker side by side with Milo. Keep going, or walk away.

BOOKING DETAILS

PROOF OF CONCEPT

£1,500 one month

Every system connected, unlimited users, the London workshop and our engineer on Slack throughout.

AFTER THAT

About £1,500 a month

For 10 to 12 people using it every day, unlimited use. In place of Looker, not on top of it.

✓ Never used for training ✓ ISO 27001 and SOC 2 ✓ Trust documents at trust.milo.ai ✓ Connections watched and fixed

Kellogg's
Milo found their best-selling cereal in the Middle East was selling out in 20 stores for two days every month. Money left on the table until the data was joined up.

A national brewery
An alert when a pub pays late and its orders are falling, sent straight to the account manager before the account goes quiet.
