

A SHORT PROPOSAL · AUGUST 2026

35 packs. 80 hours a month. **Done by breakfast.**

The reporting job that has sat on the list for six years, running by itself inside a month. With the weekly client check and the marketing sums thrown in.

Three jobs, straight from our call.

01 · THE PACKS

Every client pack, built from the live data

TODAY

Raw data out of the system, pivot tables, Beautiful.ai. About 80 hours to build 35 packs, every month.

WITH MILO

Each pack generated from the live feed, in your format, ready to talk through. Always current, never rebuilt.

02 · THE WEEKLY CHECK

The client drop-off that gets missed

TODAY

Someone eyeballs call volumes across nearly 300 clients every week, and sometimes a quiet one slips through.

WITH MILO

The 40 clients that are 90% of the business, watched daily. A drop-off gets flagged the day it starts, along with the likely reason.

03 · THE MARKETING MONEY

Does the ad spend actually create jobs?

TODAY

PPC reports from the agency, lead data loaded into ChatGPT by hand, and a judgement call on where to cut.

WITH MILO

Ad spend joined to booked jobs, by channel and region. Which spend creates work, and which just creates clicks.

What that looks like on a Friday morning.

Illustrative data. Click through, this is how each one runs.

Milo · Client MBR pack · national retailer

Automation · Monthly client packs

1st of the month · 35 packs · each in the client's own format

Action summary · national retailer

compiled 06:12 · source: live system feed

HEADLINE	THIS MONTH	LAST MONTH	TREND
Jobs added	2,140	2,065	+3.6%
Jobs visited	1,982	1,921	+3.2%
First-time fix rate	87.2%	85.1%	+2.1 pts
Avg days to visit	4.1	4.6	faster

Milo: Pack 12 of 35 built. Fix rate is up 2.1 points, driven by fewer parts waits in the North West. I have put it on the headline slide, it is the first thing they will ask about.

Daily scan · summary to your inbox Friday 10:00

Flags this week · 3 of 42 tracked accounts

volume vs 12-week pattern

ACCOUNT	SIGNAL	VS PATTERN	STATUS
Retailer F	call volume falling 3 weeks running	-34%	CALL
Restaurant group K	no bookings in 14 days, usually weekly	-100%	CHECK
Manufacturer T	volumes climbing, lead time slipping	+22%	CAPACITY

Milo: Retailer F is the one to ring before the weekend. The drop is in upholstery call-outs only, cabinet volume is normal, so it looks like a process change at their end rather than lost business. Worth a conversation either way.

Spend to booked jobs · private & commercial

last 30 days

CHANNEL	SPEND	LEADS	BOOKED JOBS	COST / JOB
PPC · private	£4,200	312	208	£20.19
PPC · commercial	£1,800	41	9	£200.00
Organic	£0	198	122	£0

Milo: Your PPC cut has not dented private bookings, that reduction looks safe. Commercial is the gap: 41 leads became 9 jobs. The drop-off happens after the quote is sent, not at the enquiry, which is fixable and worth more than any extra ad spend.

Your system stays yours. Milo plugs in beside it.

1

API from your system

Exactly as you asked on the call: your team pushes the data over API, every field you already store. No re-keying, no uploads.

2

Runs alongside your dashboard

Your IT team keeps the system and the live ops screen. Milo sits on top. Run both for the first week and compare.

3

A couple of days to set up

We are on the calls with your team while it connects. The month does not start until Milo is live, so setup time is on us.

One month. £1,500. If you don't find it back, walk away.

Your words: a £1,500 punt. Ours: the 80 hours of pack time alone pays it back several times over, and that is before Milo flags a single client drop-off or a pound of wasted spend. **If the month does not pay for itself, don't continue.** No contract, no tie-in.

And it is not new budget. You named the lines it comes from:

80 hours of pack building

the Beautiful.ai subscription

a slice of the PPC line

£1,500

one month, all in

- ✓ Connected to your system by API
- ✓ The 35 packs rebuilt in Milo
- ✓ Client watch and marketing check live
