RIGHT PRODUCT, RIGHT PLACE.

NOW ASK WHICH ONES AREN'T.

Milo is an AI data analyst for the operations team. It connects to **NetSuite, the DC and the sales and stock feeds from every host**, then answers in plain English in seconds: which stores are short, where sell-through is slipping, and what the field team should do about it.

WHAT IT IS One analyst across every host feed, NetSuite and the DC at once, answering in the language the trading meeting uses.	WHAT IT REPLACES The report queue. Host files stitched together in Excel, Power BI packs someone has to build first, answers that arrive on Thursday.	WHAT IT TAKES Read-only access to what you already run. Live in a week, nothing to migrate, nothing new for the field team to learn.

01

THREE QUESTIONS FOR MONDAY MORNING

Every answer comes back with the reasoning, the source behind each figure, and an offer to do the next thing.

● REPLENISH

Which stores are short on the top 50 lines this week?

Milo 11 sec

212 Matalan stores are out on 14 of the top 50, and the DC holds cover for 11 of those lines. Tesco is the reverse: **three weeks of cover** on the same lines in 90 stores.

MILO OFFERED TO

→ Build the DC replenishment list

● OPTIMISE

Where is sell-through behind forecast, and why?

Milo 9 sec

Hair accessories at Next are **18% behind forecast**, and it is the same **40 stores**: the new fixture went in without the bows. Every other category is within 3% of plan.

MILO OFFERED TO

→ Send the fixture list to the field team

● OPERATE

Where should the field team go next week?

Milo 12 sec

26 stores drove 60% of last week's lost sales on out-of-stocks, and nine of them had no visit last month. A North West route covers 18 of them in **three days**.

MILO SITS HERE

01 CONNECT

READ-ONLY, NO MIGRATION

NetSuite, the DC, the host sales and stock files and the spreadsheets in between. 15,000+ connectors for whatever comes next.

02 ASK

WHEREVER THE TEAM WORKS

In the browser, in Teams, or on WhatsApp from the shop floor. **The Monday brief lands before the trading meeting**, not after it.

03 ACT

DECISIONS IN THE ROOM

Milo drafts the replenishment list, the visit plan and the note to the host. **Dashboards build themselves** from what your team asks most.

BUILT FOR NUMBERS THAT GET QUOTED TO A HOST

Milo runs in the UK or EU region you choose. Your data is never used to train models and nothing goes to an external AI service. Access follows the permissions your team already has, and calculations run as code against your data rather than through the language model, so the same question returns the same number every time.
