milo × NunaBio

OCTOBER 2026

All of NunaBio's data in one place, without building a data warehouse first.

Milo connects HubSpot, Xero, Labguru, Smartsheet and SharePoint, keeps them live, and lets anyone you choose ask questions in plain English. It builds the dashboards, apps and alerts on top. We do the connecting and we keep it working.

Connects to **HubSpot** · **Xero** · **Labguru** · **Smartsheet** · **SharePoint** · **Google Analytics**

What this is

One place for orders, lab work and finance, joined up. The same answers for everyone, from the lab to the board.

What it costs

£1,500 for a one month proof of concept at our start-up rate. Then £1,300 a month, unlimited users.

What's below

What the first month builds, how it compares with a warehouse project, security, and the commercials.

What the first month builds

Your account manager builds these with you, then with the lab and the leadership team.

01 Order to cash, in one view

HubSpot deals, Labguru builds and Xero invoices joined up per order. What has shipped but not been invoiced, what is overdue, and where each order is held up and for how long.

02 Lab capacity planner

Incoming orders against what the lab can take on, week by week. See the crunch before it lands, spread orders out, and give customers dates the lab can hit.

03 Cost of goods, from real runs

A cost of goods model built from actual Labguru runs and Xero costs rather than another Excel iteration. It gets sharper with every run, and feeds the financial forecast.

04 The monthly reports, kept live

Lab operations, the manufacturing dashboard, sales admin and the board report, always up to date. The board can have its own view with only what it should see.

> **"Which orders have shipped but not been invoiced, and how long has each one been waiting?"**
>
> Milo answers from HubSpot, Labguru and Xero together, then offers to set a weekly alert so nothing slips. It also reads the instrument PDF reports sitting in SharePoint, so the data inside them can be asked about too.

The lab's own Claude apps

The stock-taking app and the analysis tools the lab built are a good start. Rebuilt in Milo, they run on live, connected data, so they don't break when a connector changes and nobody has to babysit them.

Everyone also gets the same answer to the same question, because it comes from one place, not from each person's own setup.

Numbers you can check

Calculations are never done by the language model. Milo writes the query, runs it against your data, and shows how it got the answer, so it can be validated.

Company rules and definitions are set once, and every answer follows them.

A warehouse project, or Milo

The Databricks route was the right idea two years ago. Milo gets you there without the build.

	Warehouse first	Milo
Getting started	Design a schema, build the pipelines, then add a reporting tool on top.	We connect your systems. Live in about a week.
Who builds it	A data engineer, or a consultancy on day rates.	Us. No schema to design, no code on your side.
When a system changes	Pipelines break until someone fixes them.	We maintain the connectors and fix them.
Getting answers	Dashboards someone has to build and change.	Ask in plain English. Dashboards and apps change when you ask.
Cost	Platform, build and people, before the first answer.	One monthly fee, unlimited users.

Security

The first thing we built, not an add-on.

ISO 27001 and SOC 2
Audited controls, with the reports available on request.

Hosted in Frankfurt
EU servers, GDPR compliant.

Never trains on your data
Your IP and lab data stay yours.

Roles and permissions
The lab sees the lab. The board sees the board.

Trusted by **Kellogg's**, **Two Tribes**, **BetGames** and the **Lithuanian national lottery**.

Commercials

Start-up terms, paid monthly.

Proof of concept, one month

£1,500

Start-up rate. Standard ~~£2,000~~

- Every system connected for you
- Unlimited users and unlimited use
- An account manager working with your team

After the proof of concept

£1,300 a month

Start-up rate

- Unlimited users
- Paid monthly, nothing up front for the year
- Six month break clause
