

REVENUE OPERATIONS • AUGUST 2026

Trust is our true currency. So we'll start there.

Milo joined to Dynamics 365, Tableau, Google Ads and the deal archive back to 1995. Hosted wherever your IT team wants it.

ISO 27001 compliant

SOC 2 Type I compliant, Type II in progress

Self-hosted option, your tenant or on-prem

Never trains on your data

WHAT THIS IS

One place to ask questions of Dynamics 365, Tableau, Google Ads and 31 years of deal data, in English, with the query and the sources attached to every answer.

HOW IT GETS REVIEWED

Your IT team signs off how it is deployed before anything connects. Our CTO will talk them through it and answer directly.

WHAT'S BELOW

Sections 01 to 03 are for whoever reviews this on your side. Section 04 is what it does on a normal Tuesday.

01 / SECURITY

The security questions, answered up front.

Six questions that come up every time we work with a regulated business. Everything below is checkable at trust.milo.ai.

Q1 Does it train on our data?

No. Not by us, and not by the model providers. It is written into the contract rather than sitting on a policy page we can revise later. Your data answers the question in front of it and does nothing else.

Data Handling Policy · Data Retention and Disposal Policy

Q2 Can you ring fence it?

Permissions sit under every question and are enforced at the data layer, so Milo cannot read rows the person is not entitled to. A private client analyst asking about corporate margin gets nothing back.

Every question, answer and dashboard opened is logged with the user, the timestamp and the query that ran. Your team can export it.

Data classification and access control · Least-privilege access · Centralized log collection

Q3 What certifications do you hold?

ISO 27001 compliant. SOC 2 Type I compliant, Type II in progress. Independent penetration testing, static application security testing, vulnerability scanning and an internal audit programme.

Twenty-seven documents sit behind a request button, including the SOC 2 report, the ISO certificate and the Statement of Applicability. They request, we release. No sales call in between.

Send them to trust.milo.ai

Q4 Who else touches the data?

Five subprocessors, all named publicly: Amazon Web Services for infrastructure, Cloudflare for edge security, ClickHouse for the warehouse, Fivetran for ingestion, Clerk for identity. On the self-hosted options that list gets much shorter, because the components run inside your account.

Third-party management · Vendor management program

Q5 Does the language model do the maths?

No. Milo writes a query, the query runs against your warehouse, and the number comes back from your data. The model writes the query and explains the result in English.

Every answer shows the query that ran and the sources it hit, so your commercial analyst can check a figure by reading the SQL.

Secure development procedures · Source code change approval

Q6 Do you have financial services clients?

STRAIGHT ANSWER

Not in FX. You would be our first, and your team would find that out in ten minutes anyway.

What we do have is a client base that gets audited hard. **loto.lt**, the Lithuanian national lottery, where the regulator sets the data handling bar. **Betgames** and **Octoplay**, licensed gaming suppliers operating across multiple jurisdictions, each with its own auditor. An insurance client. Gaming is where Milo was built, and where the security work came from.

Those controls were written for regulators who audit gambling and player data. Your team should test how much of it carries across to FCA obligations. Our CTO will go through it with them line by line.

Betgames and loto.lt listed at trust.milo.ai

Three ways to deploy. Your IT team picks.

We can host it, or you can. All three are real options, and we would rather show you the lot than push the one that sounds most reassuring.

OPTION A

Milo cloud

Our AWS environment, EU or UK region. The fastest route, and what every control on the trust centre was written for.

- Nothing for your IT team to run or patch
- Read-only connections, no write-back to D365
- Live inside a week

Standard commercial terms

OPTION B

Your own tenant

Milo deployed into moneycorp's AWS account, inside your VPC. Your data stays inside your own boundary.

- Your keys, your network rules, your CloudTrail
- Your perimeter controls apply unchanged
- Two to three weeks with your cloud team

Most common choice for regulated clients

OPTION C

On-premise, air-gapped

Everything on your own servers, model included. Nothing touches the public internet at any point.

- No third-party model provider in the chain
- Subprocessor list drops to nothing
- Needs GPU capacity from your side

Scoped with our CTO first

The controls, listed.

Your team will want the list rather than a paragraph about taking security seriously. This is what is published and independently assessed.

Cryptographic protections

- Encryption in transit
- Encryption at rest
- Production key management

Identification and authentication

- Multi-factor authentication
- Access control procedures
- Least-privilege production access

Data classification and handling

- Data classification and access control
- Customer data deletion
- Retention and deletion policy

Secure engineering

- Environment and tenant segmentation
- Secure development procedures
- Static application security testing

Network security

- Network firewall
- Web application firewall
- Firewall rule management

Threat management

- Vulnerability scanning and remediation
- Patch management
- Intrusion detection

Third-party management

- Penetration testing
- Vendor management program
- Contractual security commitments

Incident response

- Incident response procedures
- Security incident logging
- Regulatory authority communication

Continuous monitoring

- Centralized log collection
- Baseline configuration management
- Time synchronization

Business continuity and DR

- Database backups
- Multi-availability zone deployment
- BC and DR plan

Risk management

- Annual risk assessment
- Documented risk process
- Cybersecurity insurance

Human resources security

- Employee and contractor background checks
- Termination access revocation
- Security awareness training

Endpoint and device

- Anti-malware protection
- Mobile device management
- Removable media controls

Governance and assurance

- Internal audit programme
- CISO policy
- Board and steering committee briefing

Around ninety controls in total. Point your team at trust.milo.ai and they can pull the full set, plus the SOC 2 report, the ISO certificate, the Statement of Applicability and the ISMS manual, without going through us.

04 / WHAT IT DOES

Pick a question you'd ask on a Tuesday.

The kind of question that currently means a week of exports and pivot tables. Pick one.

miilo · moneycorp workspace

answered in 9s

YOU Which Google Ads campaigns produced funded corporate accounts last quarter? Not leads. Funded, trading accounts.

Six campaigns produced funded accounts. Two of them took 71% of the spend and produced 9% of the volume.

Q2 SPEND AGAINST TRADED VOLUME FROM FUNDED ACCOUNTS

Brand · exact		£4.1m
FX risk mgmt · corp		£2.9m
Intl payments · generic		£0.6m
Currency transfer · broad		£0.3m
Competitor conquest		£0.1m

WHY, AND HOW I GOT THERE

- I joined **Google Ads GCLID** to the D365 lead record, followed it through to account creation, then out to the **first settled trade** on the trading platform. That join has never existed for you.
- The two broad-match campaigns produce the most leads by a distance. They also take the longest to fund, at **94 days median** against 31 for brand exact.
- Attribution here is first non-brand touch. Say the word and I will rerun it on last touch so you can see how far the answer moves.

Google Ads

Dynamics 365 · Leads

Dynamics 365 · Accounts

Trading platform · Deals

Move the broad-match budget into the two campaigns that fund and, on last quarter's rates, that is **roughly £1.9m more traded volume for the same spend**. Want me to draft the Q3 reallocation as a one-pager for Hugo?

[Draft it](#)[Not yet](#)

YOU

Our deal data goes back to 1995 and there is far too much of it to look at. Find me something in there I don't already know.

The second trade matters more than the first. Corporate accounts that trade again within 34 days go on to do 4.1× the lifetime volume. Only 22% get there.

LIFETIME TRADED VOLUME BY GAP BETWEEN FIRST AND SECOND TRADE

Within 34 days		4.1×
35 to 90 days		2.0×
91 to 180 days		1.1×
Over 180 days		0.7×
Never traded again		0.2×

WHY, AND HOW I GOT THERE

- I cohorted **every corporate account since 1995** by the gap between first and second settled trade, then measured lifetime volume. 31 years of history, 11 seconds.
- It holds when I control for first-trade size, so this is not just big first trades predicting big clients. It also holds either side of 2008 and 2020.
- One caveat: pre-2011 records come from the old Dynamics instance and **4% are missing a first-trade date**. I left them out rather than guess.

Trading platform · Deals 1995 to date

Dynamics 365 · Accounts

Legacy CRM export

There are **340 corporate accounts sitting inside that 34-day window right now** who have not traded a second time. Want the list split by account owner, and an alert the moment a new account hits day 20?

Both, please

Just the list

YOU

Hugo wants the whole growth picture on Monday morning and I have not got a week. Build it.

Built. Six tabs, one link, refreshing at 06:00 every morning. Ring fenced so each team sees only their own.

GROWTH WORKSPACE · LIVE

Overview

Corporate

Private clients

Marketing

Institutions

Ops · restricted

Traded volume · MTD		+11.4%
New funded accounts		+7.2%
Revenue per account		-2.8%
Activities logged · D365		+24.1%

WHAT I WOULD FLAG TO HIM BEFORE HE ASKS

- Volume is up but **revenue per account is down 2.8%**. The growth is coming from more accounts rather than better ones. He will spot it, so it is on the overview tab already.
- The private clients tab is **visible only to the private client team and to Hugo**. Corporate cannot see it, and it will not show up in their search.
- It lands in his inbox and in Teams at 06:00. If he opens it at 09:00 he gets the 09:00 numbers, not an overnight snapshot.

Dynamics 365

Trading platform

Google Ads

Tableau extracts

Your commercial analyst usually builds this.

They did not touch this one. Want me to take the four most-requested inbound report types off their queue the same way?

Show me which four

Later

YOU

Which corporate clients have gone quiet on us, and how much is it worth?

84 accounts, £6.2m of annualised volume, no settled trade in 60 days. Eleven were in your top 100 last year.

HIGHEST VALUE DORMANT ACCOUNTS

ACCOUNT	OWNER	LAST TRADE	ANNUALISED	SIGNAL
Corporate account #4471	R. Okafor	78 days	£840k	Browsing, no contact
Corporate account #2019	S. Whitfield	71 days	£615k	Rate query, no reply
Corporate account #8802	R. Okafor	66 days	£520k	4 opens, no reply
Corporate account #1174	M. Delacroix	92 days	£487k	Competitor searches
Corporate account #6630	S. Whitfield	63 days	£410k	Seasonal, fine

WHY, AND HOW I GOT THERE

- Dormancy is measured against **each account's own trading rhythm**, not a flat 60 days. A weekly trader gone three weeks quiet matters more than a quarterly trader at day 60.
- The signal column comes from Google Ads brand and competitor terms, website sessions and D365 activity. **Account #1174 has been searching competitor terms** for three weeks.
- Twenty-two of the 84 have **no logged contact attempt at all** since going quiet.

Trading platform · Deals

Dynamics 365 · Activities

Google Ads

Website sessions

I can push those 22 to their owners in D365 as tasks this afternoon, with the reason and the last trade attached. **Nothing sends without a human approving it.**

Queue them for review

Send me the list first

ILLUSTRATIVE FIGURES

Every number on this screen is sample data shaped like yours, not moneycorp's. Please don't quote them internally. During the month we run these same questions against your actual D365, trading platform and Google accounts.

05 / THE TEAM

What changes when the business can ask, and still only sees what it should.

One commercial analyst absorbing the inbound, and a chief commercial officer with an appetite. Another dashboard does not clear that queue.

THE REQUEST QUEUE

Questions stop landing on your desk

TODAY

A question arrives, your analyst builds a report, it gets used once, and it joins the pile in Tableau nobody knows the provenance of.

WITH MILO

They ask Milo in English and get the answer with the query and sources attached. Your analyst builds the things that need building.

RING FENCING

Self-serve without opening the doors

TODAY

Wider access means wider exposure, so access stays narrow and the bottleneck stays where it is.

WITH MILO

Permissions are enforced at the data layer. Private client stays with private clients, salary data stays with the people who own it, and every question is logged.

HUGO

He gets fed without you in the middle

TODAY

Every idea he has becomes a piece of work for a lean team, and the good ideas queue behind the urgent ones.

WITH MILO

He asks it himself at 06:00 and gets the answer, the reasoning and a next step. You see what he asked, so you know where he is looking.

One month. **£3,000**. Then you decide.

We connect Dynamics 365, the trading platform, Google Ads, Tableau and whatever else matters. We build the dashboards and apps with you rather than handing over an empty product. We train the team, or you just ask Milo. **If it has not earned its place after a month, you walk away and owe nothing further.**

Nothing connects to a moneycorp system until your IT team has signed off how it is deployed. If they say no, this stops here and we part on good terms.

£3,000

Proof of concept, one month, everything included

- ✓ All connections built and tested
- ✓ Dashboards and apps built with your team
- ✓ Roles and permissions configured to your model
- ✓ Training session, or don't bother and just ask it
- ✓ Unlimited users across the business

No licence to sign and no notice period. If you stop at the end of the month, nothing rolls on.
