

PROPOSAL FOR THE PICKLE HOUSE

Decisions on data, not gut feel. For under a third of the cost of a hire.

Stock, service levels, account performance and the SKU forecast sit across Unleashed, Xero, a production board and Excel. Milo joins them up, keeps them live, and answers in plain English on the web, Slack or WhatsApp.

Unleashed

Xero

Shopify

HubSpot

Waitrose EPOS

Opplly, when it lands

WHAT IT COSTS

A finance hire against Milo, year one

The numbers work you'd otherwise hire a finance or data person to do.

HIRE A FINANCE ANALYST

£47,400

then about £40,400 a year

Salary	£35,000
Employer NI and pension	£5,400
Recruiter fee, 20%	£7,000

Two to three months to find, then learning Unleashed and Xero.

MILO, 12-MONTH AGREEMENT

£13,200

including the proof of concept

Proof of concept, month one	£1,200
12 months at £1,000	£12,000
Recruiting and onboarding	£0

Live within a week. Five users, unlimited use.

KEPT IN THE BUSINESS

£34,200

in year one, before counting the hours spent each month exporting Unleashed reports, checking Waitrose EPOS and rebuilding the forecast in Excel.

Hire figures are estimates: employer NI at 15% above £5,000, 3% pension on qualifying earnings.

MONTH ONE

What the proof of concept builds

Dashboards change when you ask. No fixed reports.

1 Weekly supply chain dashboard

Service levels, stock and orders by account. Virgin Atlantic, Waitrose and the specialist accounts on one screen, live from Unleashed.

2 12-month forecast by SKU

Built from Unleashed order history, by product and account, so buying is based on what's coming rather than a guess.

3 Budget vs actual vs last year

Load the 2027 budget once. See which accounts are up, which are down, and where you stand, without the monthly download.

4 Production and stock off the board

If an airline doubles its summer order, can production and stock cover it, and what does it cost? One question, one answer.

ON WHATSAPP

"Meeting the buyer at 2. How have they ordered this year, and are they paid up?" Also: is the ad spend moving Shopify sales, or just traffic?

MILO AND CLAUDE

Why not just use Claude?

Milo runs on models like Claude. What you pay for is everything around the model.

	MILO	CLAUDE ON ITS OWN
Unleashed	Connected already. Other Unleashed businesses run on Milo today.	No connector. Export and upload by hand.
Across systems	Unleashed orders, Xero margin, Shopify and ad spend in one answer.	One source at a time, in one person's chat.
Staying live	Refreshes on its own. We watch the connections and fix any break.	Connections drop. Dashboards go stale.
Board-ready numbers	Runs the query on the full data and shows it. The model never does the maths.	Answers can shift between chats and people.
Who sees what	Roles per person. Marketing sees marketing, not salaries or the P&L.	Whoever has the file has the data.
Your data	Never used for training. Zero data retention. ISO 27001 and SOC 2.	Depends on each person's plan.

One version of the numbers

Five people on five tools means five answers. On Milo the whole team works from the same data, the same definitions and the same dashboards.

Ready before the big accounts land

Setting up now means the forecast and the history are in place when grocery launches and the 2027 budget arrive, rather than built in a rush afterwards.

COMMERCIALS

Start small. Decide on real data.

No lock-in on the proof of concept. If it hasn't earned its place, walk away.

PROOF OF CONCEPT

£1,200 one month

Every system connected, five users, unlimited use, and the four builds above done with you.

BEST VALUE

12-MONTH AGREEMENT

£1,000 a month

The same service, fixed for a year, in return for a short video case study once it's working for you.

ROLLING

£1,500 a month

Month to month after the proof of concept. Stop whenever you like.

- ✓ Dedicated account manager
- ✓ On-site visits
- ✓ Web, Slack, WhatsApp and Teams
- ✓ Connections monitored and fixed

Kellogg's / Two Tribes / Prime Time / Dhillon's Brewery

Food and drink brands on Milo. Kellogg's found its best seller in the Middle East was selling out on shelf: money left on the table until the data was joined up.
