ALL OF IT IN ONE PLACE, PLEASE.

Milo connects your finance, order, customer and supplier data, keeps it live, and answers in plain English. With 100% of your profits fighting homelessness, every hour off admin goes back into that work.

Xero / **Order platform** / **EDI and customer systems** / **Supplier data** / **Shopify** / **Café tills** / **Microsoft 365**

WHAT LANDS ON A MONDAY MORNING

Wholesale is 6% behind target.
Two accounts have stopped ordering. Call list ready.

A supplier invoice is 8% over the agreed price.
Flagged for someone to approve or query.

EDI orders from one customer stopped at 06:00.
Ops told before a delivery gets missed.

Illustrative, not your data.

START WITH ONE ROLE

Milo runs it	Reports, briefings, alerts
Milo prepares, a person signs off	Invoice queries, supplier chasers
Stays with people	Trainee support, customer relationships

Measure its manual hours before and after the month, then repeat elsewhere.

SECURITY

Frankfurt
EU servers, GDPR compliant, ISO 27001 and SOC 2. Documents at **trust.milo.ai**.

No training
Your data never trains AI. It's in the contract.

Trainee data stays out
If you want impact reporting later, Milo can count hours trained without seeing names.

Roles per person
Each person sees only what they should.

THE OTHER QUESTIONS

Do we still need Claude?	Only if you want it. Milo also does web research and decks. Unlike Claude, the same question gets the same answer, whoever asks.
And Power BI?	You can stop building it. Ask Milo for a dashboard and it stays live.
How much work is it for us?	Your systems map gives us the list. Our engineer connects everything and fixes any break.

£1,500

one month, then £1,500 a month

The proof of concept
Your data connected, sessions with your team, unlimited users. If it hasn't earned its place after the month, you stop.

Who's on it
Two Tribes: seven systems connected in two weeks, no data team. We can set up a call. Also Kellogg's and European lotteries.
