

A SHORT PROPOSAL · UPDATED SEPTEMBER 2026

35 packs. 80 hours a month. Done by breakfast.

The packs by breakfast. Then the diary: where the lead time is over seven days, and which tech move fixes it.

Three jobs, in the order we would do them.

01 · THE PACKS

Every client pack, built from the live data

TODAY

Raw data out of the system, pivot tables, Beautiful.ai. About 80 hours to build 35 packs, every month.

WITH MILO

Each pack generated from the live feed, in your format, ready to talk through. Always current, never rebuilt.

02 · THE DIARY

Where the lead time is over seven days, and what fixes it

TODAY

Around 5,000 jobs a week, booked against the diary by hand. When an area fills up the next slot can be three weeks out, and moving a tech is a judgement call.

WITH MILO

Every morning: which areas are over the seven-day target, how many jobs are waiting, and which tech has spare days nearby. Ops confirm the move.

03 · THE CLAIMS SYSTEM

The KPI pack on claims, before anyone has to build it

TODAY

A claims system is going in now. Its reporting will be one more pack built from an export and a pivot table.

WITH MILO

Claims by client, product and outcome, on the same dashboard as the packs, from the day it goes live.

The weekly client check and the marketing sums from the first version still run. They come with the connection.

What that looks like on a Friday morning.

Illustrative data, shaped like yours. Click through. During the two months these run on your real feed.

Milo · Client MBR pack · national retailer

Automation · Monthly client packs

1st of the month · 35 packs · each in the client's own format

Action summary · national retailer

compiled 06:12 · source: live system feed

HEADLINE	THIS MONTH	LAST MONTH	TREND
Jobs added	2,140	2,065	+3.6%
Jobs visited	1,982	1,921	+3.2%
First-time fix rate	87.2%	85.1%	+2.1 pts
Avg days to visit	4.1	4.6	faster

Milo:

Pack 12 of 35 built. Fix rate is up 2.1 points, driven by fewer parts waits in the North West. I have put it on the headline slide, it is the first thing they will ask about.

Automation · Capacity watch

Every morning 06:30 · diary + unappointed jobs · by postcode area

Areas over the seven-day target · this morning

lead time = next open slot, working days

AREA	WAITING	LEAD TIME	SPARE CAPACITY NEARBY	STATUS
CT · Canterbury	8	22 days	ME, two open days Thu and Fri	MOVE
BB4 · Rossendale	11	9.3 days	BB1, three open days next week	MOVE
ME · Medway	6	7.5 days	none within 30 minutes	WATCH
B12 · Birmingham	3	1 day	not needed	OK

Milo:

Two moves fix most of it. The BB1 tech has three open days next week and BB4 is twenty minutes away, which clears nine of the eleven. In Kent, the two open days in ME cover six of the eight waiting in CT and bring it back under seven days. Both are queued for ops to confirm. Nothing changes in the diary until they do.

Flags this week · 3 of 42 tracked accounts

volume vs 12-week pattern

ACCOUNT	SIGNAL	VS PATTERN	STATUS
Retailer F	call volume falling 3 weeks running	-34%	CALL
Restaurant group K	no bookings in 14 days, usually weekly	-100%	CHECK
Manufacturer T	volumes climbing, lead time slipping	+22%	CAPACITY

Milo: Retailer F is the one to ring before the weekend. The drop is in upholstery call-outs only, cabinet volume is normal, so it looks like a process change at their end rather than lost business. Worth a conversation either way.

Your system stays yours. Milo plugs in beside it.

1

Our engineers connect to it, under NDA

Read access to the system that holds the jobs, the diary and the tech reports. Our engineers look at the back end first and say exactly what they need. Nothing writes back.

2

Packs first, diary second

Month one, the 35 packs from the raw data you export today. Month two, the diary: lead time by postcode and the tech moves. Claims when that system goes live.

3

It reads the diary. It does not run it.

A scheduling tool and a field-service platform have both been tried here and stalled. Milo does not reschedule anyone. It shows ops where capacity is short and which move fixes it. A person confirms it.

Two months. £1,500 a month. £1,500 back if you don't carry on.

Your words: a £1,500 punt. Two months is long enough to connect your system properly and get the packs and the diary running, and long enough for you to know. **Stop at the end of month two and we refund £1,500.** It goes in the contract. Sign in September, our engineers start the same week, and the two months run from 1 October.

And it is not new budget. You named the lines it comes from:

80 hours of pack building

the Beautiful.ai subscription

a slice of the PPC line

£1,500

a month · two months from 1 October · everything included

- ✓ Our engineers connected to your system, under NDA
- ✓ The 35 packs rebuilt in Milo in month one
- ✓ The diary and lead time by postcode in month two
- ✓ Client watch running, and anyone can ask Milo anything

After that, it follows how much you use. Around £1,200 a month for the packs alone, around £2,000 with the diary and claims running through it. Confirmed once our engineers have seen the system.
