

MILO FOR BIG BUS TOURS · OCTOBER 2026

What is a customer's trip worth?

Every city reports passengers. What those passengers were worth, once the river cruise, the walking tours and the commission are counted, takes a day of exports from Ventrata, Google Analytics and finance. Milo connects to all of them and answers in seconds. **Then it tells you what to do about it.**

Named account manager and engineer · Hosted in Frankfurt · ISO 27001 and SOC 2 · Read-only
· Never trains on your data

WHAT MILO IS

One place to ask about every city, built on your own booking, web and finance data. Answers, dashboards, reports and small apps that stay up to date.

WHO LOOKS AFTER YOU

A named account manager and a named engineer from day one. Set up in two weeks, then your teams test it on real work.

WHAT WE'RE ASKING FOR

A one month proof of concept for £2,000. If it hasn't earned its place by the end, you walk away.

What is a customer's trip worth in each city this summer, after commission?

London carried the most passengers. **A Dubai trip was worth the most, £52 a head**, against £40 across these six cities. Rome and Barcelona sell on volume.

TRIP VALUE BY CITY · JULY TO SEPTEMBER · CONVERTED TO GBP

CITY	PASSENGERS	TRIP VALUE A HEAD	WITH AN ADD-ON	BOOKED DIRECT
London	612,400	£41	34%	46%
Paris	388,900	£37	22%	31%
New York	341,200	£44	29%	38%
Rome	296,700	£36	14%	27%
Barcelona	204,600	£33	18%	29%
Dubai	118,300	£52	41%	52%
Six cities	1,962,100	£40	27%	37%

I can put trip value next to passengers in every city's weekly report, so each general manager sees both. **Nobody has to build it on a Monday.**

Add to the weekly report

Show me Rome

London ran 25% off online for the first two weeks of September. Did it deliver an uplift?

It put **10,300 more people on the buses**, up 11%, but net revenue rose **£26,000, or 0.7%**. The weekdays earned it. **The weekends gave it away.**

LONDON · 1 TO 14 SEPTEMBER · EXPECTED WITHOUT THE PROMOTION VS ACTUAL

● Expected ● Actual

Weekdays: **+£61,000** net. Weekends, which were already selling 92% of seats: **-£35,000**.

HOW I GOT THERE

- "Expected" is the same fortnight last year, adjusted for how Paris and New York moved without a promotion and for the number of rain days.

I can run this check on every promotion in every city, 14 and 28 days after it ends, and send it to the general manager and commercial planning. **Next time, weekdays only?**

Check every promotion

Not yet

Which days in the next fortnight should carry a discount in London?

Four of the next fourteen days are forecast under 60% full. Discount those. **Both Saturdays will fill without help.**

LONDON · FORECAST SEATS SOLD · 5 TO 18 OCTOBER

● Discount ● Leave at full price ○ Hold

HOW I GOT THERE

- Between July and September, £171,000 of London's discount went on days that were already 90% full.

I can send this calendar to London every Monday, and flag any promotion that lands on a day forecast over 85% full **before it goes live.**

Send it on Mondays

Do Paris too

ILLUSTRATIVE FIGURES Every number above is sample data shaped like a multi-city sightseeing business, not Big Bus's own. During the proof of concept the same questions run on your data.

**THE SAME CONNECTIONS
ALSO ANSWER**

- Where the website and app lose people between landing and paying
- Which add-ons to offer each customer, and when
- Which channels earn the bookings, not just the clicks
- Who has travelled with Big Bus before, in any city

01 · HOW WE GET YOU THERE

Two named people, from the first day.

You don't need a data team to run Milo, because we bring one. A named account manager and a named engineer have it set up inside two weeks, so your teams spend the rest of the month testing it on real work. They stay with you afterwards.

Set up

WEEKS 1 AND 2

Test

WEEKS 2 TO 4

YOUR ACCOUNT MANAGER

One person to call.

Named at the kick-off. Your single point of contact.

A weekly check-in, in person or on Teams.

Builds the dashboards, reports and apps you ask for, or builds them with you. Once built they are saved, not made from scratch each time.

Trains e-commerce, commercial planning and the city teams.

YOUR ENGINEER

Your tech team's contact.

Builds and looks after every connection, starting with Ventrata.

Agrees with your tech team how and when data is collected, so the booking engine is left alone.

Keeps every definition the same across cities, currencies and systems.

Your support contact for anything technical, during the proof of concept and after.

After the proof of concept, **the same two people stay with you.** A new city, a new add-on or a new system: you call them.

02 · WHO ELSE

Who else runs on Milo.

BEACH CLUBS AND HOTELS ·
WORLDWIDE

Nikki Beach

One view of every venue

Venues across Europe, the Middle East, the Americas and Asia, each on its own systems, reporting in one place.

CONSUMER GOODS ·
INTERNATIONAL

Marico

Their own forecasting app

The business behind Parachute and Saffola. Users built and tested their own volume-forecasting app in Milo.

LIVE DEALER GAMES · MULTI-
MARKET

BetGames

Reports: 3 days to 3 minutes

Every campaign is scored against a control group, so the team knows what a promotion earned, not just what it sold.

BREWERY AND TAPROOM · LONDON

Two Tribes

1 to 12 users in six weeks

Seven systems that had never spoken. Now sales, finance and production build their own dashboards.

GLOBAL FOOD · COMMERCIAL FINANCE

Kellogg's

Dozens of markets

The commercial finance team asks Milo directly, across dozens of markets and hundreds of products.

Light on Ventrata. Careful with your data.

THE BOOKING ENGINE

No queries on every click

Milo collects new and changed bookings on a schedule your tech team sets, away from peak hours. Dashboards, filters and apps run on Milo's own copy, so ten people opening the same report send nothing to Ventrata.

YOUR DATA

Read-only, in the EU

Hosted in Frankfurt. Milo never writes to Ventrata or anything else, and never trains on your data. Customer names can be left out: trip value needs bookings, not people. ISO 27001 and SOC 2, documents at trust.milo.ai.

THE NUMBERS

Same question, same answer

The arithmetic is never done by the language model. Milo writes a query, runs it on your data and shows its working, so every figure traces back to the booking. If your systems change, the engineer reconnects them.

	MILO	EXPORTS PASTED INTO CLAUDE	POWER BI AND FABRIC
Getting the data in	Connected once by our engineer. Never uploaded again.	Exported and uploaded every time you ask.	A data model and pipelines to build first, by someone with SQL.
Staying up to date	Dashboards and apps refresh themselves.	A snapshot of the day you uploaded it.	Refreshes, once it is built and maintained.
A new report	Ask for it in plain English, then save it.	Good, until the next export.	Back to whoever built the model.
Who helps	A named account manager and engineer.	You.	A hire, or a side project.

One month. £2,000. Then you decide.

Two weeks to set up on Big Bus's own data, then your teams test it. Ventrata, Google Analytics, finance and third-party sales connected read-only, trip value and the promotion check running for the cities you choose, **and every figure checked against the reports you build today.**

New hires	None
Warehouse project	None
Seat licences	None, unlimited users
Owed after month one	Nothing, unless you carry on

PROOF OF CONCEPT · ONE MONTH

£2,000

Everything included

- A named account manager and engineer
- Ventrata, Google Analytics, finance and third-party sales connected
- Trip value, the promotion check and your first dashboards, live by week two
- Unlimited users, every city

Carry on and it is **around £2,000 a month**, depending on usage, with the same account manager and engineer.
