

FOR OPERATORS, GAME STUDIOS AND PLATFORMS

Ask your numbers anything. Get the answer in minutes.

Milo connects to your platform, your warehouse, your BI layer, your CRM and your finance system, then answers questions in plain English. GGR, bonus payback, player cohorts, market by market. No SQL, no dashboard backlog, no waiting on a report.

✓ No SQL needed

✓ Live in a week

✓ Connects to what you already run

✓ Hosted in your region

TRUSTED BY

Around a dozen operators, studios and aggregators run on Milo. BetGames has been on it for two years, across 15 TB of live transaction data.

01 What people ask it.

Three real shapes of question, one from each side of the industry. Every answer comes back with the reasoning, the source behind each figure, and an offer to do the next thing.

OPERATOR

"Is the bonus spend paying back?"

 Milo 11 sec

Bonus cost is **up 24%** while NGR from bonused players is **flat**. About a third of it went to players who were already depositing that week.

BONUS COST · BY CAMPAIGN

MILO OFFERED TO

Build the exclusion segment

GAME STUDIO

"How is the new title doing across operators?"

 Milo 9 sec

GGR is **up 22%** over six months, and **four partners** produce 71% of it. Where the game sits deep in the lobby, rounds per player are less than half.

GGR · BY OPERATOR

MILO OFFERED TO

Draft the placement note

PLATFORM

"Which tenants are quietly slipping?"

 Milo 12 sec

Two brands have been slipping for six weeks and neither has raised a ticket. Both lost the same content supplier in their last lobby refresh.

NGR GROWTH · BY TENANT

MILO OFFERED TO

Alert the account managers

Figures are illustrative. On your data, every answer traces back to the row it came from.

02

The same Monday morning, twice.

The dashboard answers the question you already knew to ask. Everything else becomes a ticket.

TODAY

1

The question comes up in the trading call.

2

It becomes a request for the data team.

3

It queues behind the regulator submission.

4

Exports out of the platform, the warehouse and the CRM, into a spreadsheet.

Thursday afternoon: the answer lands. The campaign went live on Monday.

WITH MILO

1

Anyone in the call asks it in plain English.

2

Milo reads across every system at once.

3

The answer comes back with the working shown.

4

It offers to do the next thing, and does it.

Still Monday, 9:02am: **twelve seconds**, and nothing had to be built first.

03

Live in a week.

01 Connect

Read only, no migration

Point Milo at what you already run. 700+ integrations plus your warehouse and BI layer. Nothing gets replaced and nothing moves.

02 Ask

Wherever the team works

In the browser, in Slack, Teams, WhatsApp or Telegram. The morning brief arrives on its own, before the call rather than after it.

03 Act

Decisions in the room

Trading, marketing, product, finance and compliance each get their own numbers, and the dashboards build themselves from what gets asked most.

04

Built for a licensed business.

Milo runs in your own environment, in the region you choose, and the models run inside Milo's own cloud under zero data retention, so nothing goes to OpenAI or any other external AI service. Your data is never used for training. Access follows the roles and row level permissions you already run, so a studio sees its own titles and a tenant sees its own rows and never anyone else's. Calculations are never done by the language model, they run as code against your data, so the same question returns the same number every time.
