FUEL express

MILO FOR FUEL EXPRESS · OCTOBER 2026

Andy, every container on one calendar.

Fifteen to twenty containers a week, each one opened to see if it's confirmed or stuck at port. Milo puts them all on one calendar: landed, at sea, held, not yet built. It tells you when one slips. **Then it keeps the stock and the average cost right without anyone keying it in.**

Live before the first frost · £1,500 to try it for a month · We do the setup, nothing to rebuild

> What lands next week, and is any of it stuck?

17 containers land next week. **12 are confirmed.** **3 are held at port** and 2 haven't been confirmed by the forwarder. The one to watch is 41 pallets of kiln-dried logs at Felixstowe: Midlands log stock covers nine days.

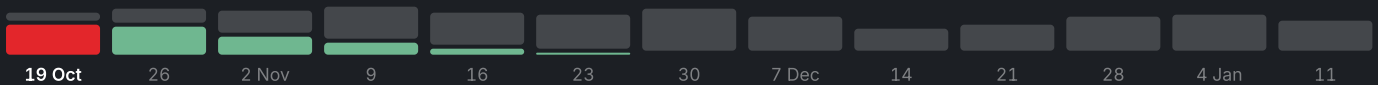

WEEK COMMENCING 19 OCTOBER · BY DAY

Confirmed · Not confirmed · Held at port

Mon 19 (3)	Tue 20 (4)	Wed 21 (3)	Thu 22 (4)	Fri 23 (3)
FX-2231 Smokeless coal · 24 pallets Immingham · confirmed	FX-2240 Restaurant charcoal · 20 pallets Felixstowe · confirmed	FX-2238 Smokeless coal · 24 pallets Immingham · confirmed	FX-2250 Smokeless coal · 24 pallets Immingham · confirmed	FX-2257 Restaurant charcoal · 20 pallets Tilbury · confirmed
FX-2232 Smokeless coal · 24 pallets Immingham · confirmed	FX-2241 Restaurant charcoal · 20 pallets Felixstowe · confirmed	FX-2247 Ash logs · 38 pallets Felixstowe · paperwork query	FX-2251 Smokeless coal · 24 pallets Immingham · confirmed	FX-2258 Firelighters · 18 pallets Hull · confirmed
FX-2219 Kiln-dried logs · 41 pallets Felixstowe · customs check, day 3	FX-2236 Heat logs · 22 pallets Hull · confirmed	FX-2249 BBQ charcoal · 20 pallets Tilbury · confirmed	FX-2253 Heat logs · 22 pallets Hull · no confirmation yet	FX-2260 Smokeless coal · 24 pallets Immingham · confirmed

NEXT THREE MONTHS · CONTAINERS PER WEEK

Confirmed · Booked, not yet confirmed

I can WhatsApp you this **at 7am every morning, wherever you are**, and message you the moment a container is held or its date moves.

Send it every morning · Show by port

Where are the 50 containers on the smokeless coal contract?

10 are delivered and 15 are on the way. **25 haven't been built yet**, and at the factory's current rate the last one lands in late February, three weeks after the contract date.

SMOKELESS COAL CONTRACT · 50 CONTAINERS · BY STATUS

STATUS	CONTAINERS	PALLETS	NEXT DATE	WHAT CHANGED
Delivered	10	240	Last in 9 Oct	In stock at both depots
At port	2	48	Immingham, 19 Oct	One held two days
At sea	4	96	Lands 22 to 30 Oct	On schedule
Built, booked to sail	9	216	Sails 28 Oct	Slipped a week
Not built yet	25	600	Factory says Dec	No dates given
Contract	**50**	**1,200**	**Due by 6 Feb**	**Running late**

The broker portal lists all 50 as open. Milo reads the portal, the forwarder's emails and the import system, and **shows each container where it is**.

I can draft an email to the factory **asking for build dates on the 25**, ready for you to send, and move them onto the calendar when they reply.

Draft the email | Show every contract

What cleared customs yesterday, and what does it do to stock and average cost?

4 containers, 96 pallets, cleared yesterday. Smokeless coal's average cost moves **from £230.50 to £232.50 a pallet.** And **ash logs are 38 pallets lower** than the stock sheet says: sales since Friday haven't come off.

MIDLANDS DEPOTS · STOCK AND AVERAGE COST PER PALLET

PRODUCT	IN YESTERDAY	STOCK SHEET	ACTUAL STOCK	AVERAGE COST	NEW AVERAGE
Smokeless coal	48	412	460	£230.50	£232.50
Restaurant charcoal	20	188	201	£312.00	**£309.40**
Heat logs	28	143	164	£276.20	£276.90
Kiln-dried ash logs	0	212	174	£248.00	£248.00
All products	**96**	**955**	**999**		

Today someone keys containers onto the stock sheet and takes sales off by hand. Milo reads the import system and the order portal, so **the stock figure and the average cost update on their own**.

I can update stock and average cost **every time a container clears or a sale is invoiced**, and warn you before any product drops under its planogram level at a depot.

Keep it live | Show by depot

ILLUSTRATIVE FIGURES Every container, port, date and price above is sample data shaped like Fuel Express, not your own. During the proof of concept the same questions run on your data.

01 · IMPORTS, STOCK AND AVERAGES

Three systems that need to agree. Milo joins them up.

The import system, the stock sheet and the averages sheet each hold part of the picture, and people carry the numbers between them. Milo reads all three, so a container moves from booked to landed to in stock to sold without anyone retyping it.

1 · IMPORT SYSTEM

Containers booked

Opened one by one to see what's confirmed or held.

The calendar. Every container, every status, three months ahead.

2 · STOCK SHEET

Pallets in, pallets out

Keyed on after customs, taken off after sales, often late.

Live stock. In when it clears, out when it's invoiced, by depot.

3 · AVERAGES SHEET

Cost per pallet

Weighted average across buys at different prices.

Live margin. Every sale against today's average cost, less delivery.

Import system

Containers, shipments, customs clearance.

Broker portals

Vessel and port status for each container.

SharePoint

The stock sheet, the averages sheet, planograms.

Order portal

Orders, invoices and credit notes. We look at the best way in during week one.

Outlook

Supplier and forwarder emails, if you want them in.

Weather

Fourteen-day forecasts by region, built in.

Teams and WhatsApp

Where the alerts and morning summaries arrive.

Excel

Any answer comes out as a spreadsheet when you ask.

NO EXTRA WORK

Nothing gets rebuilt and nothing changes in the systems you run today. Milo connects read-only and we do the setup ourselves, so it doesn't add to anyone's project list. It takes work off it instead: the reports, the one-off views and the "can you pull this for me" requests get answered in Milo.

02 · WHY NOT JUST CLAUDE

Claude is good for price sheets. Milo is built to run on your data.

Keep using Claude for price sheets and marketing. Milo is for the numbers: it's connected to your systems, it gives everyone the same answer, and your data never leaves a controlled, audited home.

	MILO	CLAUDE ON ITS OWN
Your data	Connected once, by us, with access set by role. Hosted in Frankfurt and never used to train any model.	Copied in by hand, or admin access opened up to the whole account.
Same answer	The arithmetic runs on your data, not in the model. Six people asking the same question get the same number.	Varies with who asks and how, even with a template.
Connections	Syncs every five minutes. We're told the moment a connection breaks, and we fix it.	Can break silently. You find out when a number looks wrong.
Without asking	Morning summaries, alerts on WhatsApp or Teams, live dashboards.	Waits to be asked.

SECURITY

ISO 27001 and SOC 2. Built first for lotteries and gaming operators, so it has been through the audits and penetration tests that regulated businesses need. Kellogg's and BetGames run on it. Details at trust.milo.ai.

03 · AFTER THE CONTAINERS

Then the sales team builds what they need.

The calendar comes first. Once your data is in, the team asks for the next thing in plain English, with no code and no ticket.

WEATHER

Cold nights ahead

Which forecourts are low on coal and logs before a frost, ranked into a call list for the week.

DEPOTS

36 sites against planogram

Every distribution centre against its baseline, and a warning before a product runs short.

MONEY

Who hasn't paid

Overdue invoices and credit notes from the order portal, flagged to the right person each Monday.

DRINKS · WAREHOUSE TO PUBS AND TESCO

Two Tribes

Stock moving out of a warehouse to pubs, wholesalers and **831 Tesco stores**. Seven systems, no data team. Milo connected all of them, and the team built their own dashboards, apps and alerts from there.

04 · GETTING STARTED

Up and running in week one. Decide after a month.

DAY 1

Connect

The import system, broker portals and SharePoint sheets. Read-only, done on our side, usually inside a day.

WEEK 1

Everything running

The container calendar, live stock and averages, dashboards for the team and the first apps, all built and in use. Your account manager, also called Andy, builds them with you around how you work today.

WEEKS 2 TO 4

Use it, add to it

The sales team asks for what saves them the most time and it gets built. Check every figure against what you have now, then decide.

PROOF OF CONCEPT · ONE MONTH

£1,500

Everything connected, unlimited users and use

- A named account manager, on site or online
- Calendar, dashboards and apps live in week one
- Nothing owed after the month unless you carry on

Start Monday 19 October and everything is running by the 26th, ahead of the cold.

Carry on at **£1,500 a month**, unlimited users. Two hours a day back for each of ten people is around 400 hours a month.

To start, reply to Gregg or email **tom@milo.ai**.
