

PREPARED FOR PEERMONT

Eleven properties, two countries, one question.

Milo connects to your gaming system, your PMS, your POS, Winners Circle and your finance system, then answers in plain English. Gaming win, occupancy, food and beverage, conferencing, property by property. No SQL, no report request, no waiting for the pack to be built.

✓ No SQL needed

✓ Live in a week

✓ Connects to what you already run

✓ Rand and pula in one view

ONE VIEW ACROSS THE ESTATE

Emperors Palace · The Grand Palm · Umfolozi · Rio · Graceland · Khoroni · Mmabatho Palms · Thaba Moshate · Frontier Inn · Mondior · Sedibeng

01 What people ask it.

Three questions, one from the floor, one from the hotel, one from group. Every answer comes back with the reasoning, the source behind each figure, and an offer to do the next thing.

GAMING FLOOR

“Which machines are earning their space?”

 Milo 11 sec

Win per machine in two zones is **31% below** the floor average, and **eleven units** have not moved since the last refresh.

WIN PER MACHINE · BY ZONE

MILO OFFERED TO

List the eleven to swap out

HOTELS AND CONFERENCING

“Did the conference season pay for itself?”

 Milo 9 sec

Conference room nights are **up 18%**, and delegates spend **2.3 times more** across food, beverage and gaming than leisure guests.

SPEND PER GUEST · BY SEGMENT

MILO OFFERED TO

Break this out by property

GROUP

“Which properties are behind, and why?”

 Milo 12 sec

Two properties are behind budget on gaming win while the group is ahead. Both lost midweek visits when the promotion calendar changed.

GAMING WIN VS BUDGET · BY PROPERTY

MILO OFFERED TO

Send each GM their own version

The same Monday morning, twice.

The pack answers the question you already knew to ask. Everything else becomes a request.

TODAY

- 1 The question comes up in the Monday meeting.
- 2 It becomes a request to finance or the analyst.
- 3 It queues behind month end and the board pack.
- 4 Exports out of the gaming system, the PMS and the POS, into a spreadsheet.

Thursday afternoon: the answer lands. The promotion went live on Monday.

WITH MILO

- 1 Anyone in the room asks it in plain English.
- 2 Milo reads across all eleven properties at once.
- 3 The answer comes back with the working shown.
- 4 It offers to do the next thing, and does it.

Still Monday, 9:02am: **twelve seconds**, and nothing had to be built first.

Live in a week.

01 Connect

Read only, no migration

Point Milo at the gaming system, the PMS, the POS, the loyalty database and finance. 700+ integrations. Nothing gets replaced and nothing moves.

02 Ask

Wherever the team works

In the browser, in Teams or on WhatsApp, so a general manager can ask from the floor. The morning brief arrives on its own, before the meeting.

03 Act

Decisions in the room

Each GM, and group finance, marketing and compliance, get their own numbers, and the dashboards build themselves from what gets asked most.

Around a dozen gaming operators, studios and aggregators run on Milo, and BetGames has been on it for two years across 15 TB of live transaction data. On the hospitality side it runs for brands including KFC and Kellogg's.

04

Built for a licensed floor.

Milo runs in your own environment, in the region you choose, including AWS in Cape Town, and the models run inside Milo's own cloud under zero data retention, so nothing goes to OpenAI or any other external AI service. Your data is never used for training. Access follows the roles you already run, so a general manager sees their own property and group sees the estate. Calculations are never done by the language model, they run as code against your data, so the same question returns the same number every time and every figure traces back to the row it came from, which is what the boards and the auditors ask for.
