

Webbs Garden Centres – AI Solutions Partner

Board presentation, 30 September 2026

Tom Pickett and Philipp Buschhaus

Milo: an AI data platform and assistant, with a team that works alongside you

35

customers

13

people in the team

£2.9m

raised, including from EWOR and InReach Ventures

Tom Pickett
Commercial lead

Philipp Buschhaus
Co-founder and CTO

Andrew Round
Your account manager

Rakshith
Your dedicated engineer

SOC 2 Type II and ISO 27001 certified, hosted in the EU

Your five priorities

Priority	Target	Approximate annual value
Wages	From about 27% of sales to 25%, maintaining service	£700k
Growth	Better ranging and replenishment; online plant sales	To be sized in the first weeks
Customers	One view across retail, loyalty, ecommerce and events	To be sized in the first weeks
Gross margin	Up two percentage points across channels	£700k
Ways of working	Simpler procedures; sensible automation	Time released for managers

Values calculated on £35m turnover, from the brief.

Your information sits in more than ten systems, and about half of them are not connected

Standard reports only answer the questions they were built for.

One-off questions go to Excel, and depend on a few people.

Wages, sales, footfall and customer data cannot easily be seen together.

With Milo, every system is connected, and all your information is in one place

Business Central stays where it is.

Replaces Power BI and your existing reporting tools.

Wages, sales, footfall and customer data seen together.

One place for all your information, and an assistant your teams can use every day

Connects everything

- All your systems, with history
- Business Central stays as it is
- You own the data

Answers questions

- Plain English, in Teams, email or web
- Explains why, not just what
- Dashboards built by asking
- Board packs as PDF or PowerPoint

Takes action

- Daily alerts to store managers
- Scheduled reports
- Forecasts and recommendations
- Simple apps, such as a store manager's daily screen

What this means in practice

No separate data warehouse project. Milo is the data platform.

Replaces Power BI and your existing reporting tools.

Unaffected by the Business Central upgrade.

One approved AI tool for all colleagues.

Your priorities, and what Milo would do for each

Priority	What Milo would do	Information used
● Wages	Wages against sales and footfall	iTrent, tills, footfall
● Growth	Ranging, replenishment, online plants	Business Central, tills, website, nursery
● Customers	One view of each customer	Loyalty, Paraspar, HoC, NetTickIT, Klaviyo
● Gross margin	Daily margin, competitor prices	Business Central, tills, competitor websites
● Ways of working	Automated reports, simpler procedures	OPUS, Ring Central, all of the above

Live demonstration

Everything connected in two weeks, and results in front of the Board at six

Wages and margin alerts live by mid November, in time for Black Friday (27 November) and Christmas trading.

How we choose, test and measure

Choosing	By value to Webbs and speed. Order agreed with you.
Testing	One or two stores first, then rolled out.
Measuring	Baseline agreed in the first two weeks. Progress reported monthly.
Making it last	Alerts and reports arrive in Teams. Usage tracked.

We need from you: system access, your definitions, trading calendar and categories.

Example: a store manager's 8am message in Teams

 **Milo** 08:00

Good morning. Yesterday, wages were **27.8%*** of sales, against a 25% target.

Staffing was above footfall from 2pm to 4pm. Worth checking this Saturday's rota.

*Illustrative figures, not customer data.

Little extra work for your team

Our team	All the technical work: connections, data, reports, alerts.
Your IT partners	We share our approach and welcome their review.
Your managers	One person, an hour a week. Four to six early users.
A Board sponsor	One named person who receives the progress reports.

Named people, and a direct line to them

Andrew Round

A shared channel in Teams, Slack or WhatsApp. Responses within the hour.
Onsite at Wychbold as often as you need.

Your data stays yours, and people only see what they should

SOC 2 Type II and ISO 27001.
Penetration tested.

Hosted in the EU.

Access set by role. Only named
people see payroll.

A full record of who asked what,
and when.

You own your data, and can
delete it at any time.

Full trust and security pack for
your IT consultant.

Results for similar businesses

Coolr

150 people, no data team,
after a Power BI rollout
that did not work.

Live in the first week.

Kellogg's

Global cereal and snacks
brand.

**Deployed in their own
cloud with role-based
access.**

Marico

International consumer
goods business
(Parachute, Saffola).

**Users built and tested
their own volume-
forecasting app.**

BetGames

Regulated gaming.

**Report turnaround
from three days to
three minutes.**

“Like having a data engineering team, but better.” Coolr, COO

Reference contacts available. [Tom to add named contact once confirmed]

A simple monthly price, with the team included

Set-up	Connect all your systems with history, baseline, training at Wychbold	£4,000 one-off
Milo	All connections, all sites and users, your account manager and engineer	£2,500 a month
Milo with data platform	As above, plus all your history in one place	£3,500 a month

- 13-month agreement.
- No separate charges for data storage, data transfer or support.
- Unlimited use on both.
- Both replace your Power BI licences.

About **£50k a year** in total with the data platform, against a combined target of around **£1.4m a year** in wages and margin.

Bringing wages down by 0.15 of a percentage point would cover the full annual cost.

£1.4m

£50k

Next steps

- 1 Your decision on an AI Solutions Partner.
- 2 Reference calls with our customers, arranged this week.
- 3 Trust and security pack to your IT consultant.
- 4 Start w/c 19 October. All systems connected by the end of October. Board read-out w/c 30 November.
